

Antenna Indicators display mode of operation and selected area of target coverage.

Target Lock Display shows locked target vehicle speed, allowing the operator to both lock and monitor a vehicle's speed simultaneously. When in Stopwatch mode, displays **Elapsed Time**.

Fastest indicator illuminates when the unit is in fastest vehicle mode.

Light Sensor automatically adjusts display brightness.

Audio Speaker

Patrol Speed Display shows speed of patrol vehicle. When in Stopwatch mode, displays entered distance in yards.

Stopwatch indicator illuminates when in Stopwatch mode.

Target Speed Display shows speed of closing or opening vehicle. When in Stopwatch mode, displays average target speed.

Internal Test checks all indicators and display segments, dual crystal timebases, and internal circuit operations.

Lock-Release freezes the target speed into the **Locked Target** window, while the unit continues to monitor both target and patrol speeds. Also, starts and stops clock in Stopwatch mode.

Range sets the distance for target capture.

Audio sets the volume for the Doppler audio, assisting in proper target identification.

Mode selects the mode of operation: Moving, Stationary, or Stopwatch.

Power Control

Hold switch controls the transmission of RF signal, defeating radar detectors.

Slower indicator illuminates in same direction/moving mode to indicate a target moving slower than the patrol vehicle.

Bar Graph indicates the range setting.

 of the Judicial Panel on Multidistrict Litigation Defense of Speeding, Reckless Driving & Vehicular Homicide James
 Farragher Campbell,P. David Fisher,David A. Mansfield,1984 **ITS Data Quality** Brian L. Smith,2003 The Virginia
 Department of Transportation VDOT has made significant investments in the traffic monitoring infrastructure that supports
 intelligent transportation systems ITS The purpose of this infrastructure is to provide accurate real time information on the
 status of the transportation system thus it is critical that the monitoring infrastructure provide accurate data Although
 detectors are usually tested immediately after installation it is well known that they operate in a very harsh environment and
 thus are susceptible to degradation in accuracy and or complete failure Consequently a long term commitment to data
 quality assurance is required through maintenance data quality assessment testing and repair replacement The quality of
 data from ITS applications is becoming increasingly important as the data are more widely used Not only is the data used in
 real time operations but also in myriad other often more traditional transportation applications The purpose of this research
 project was to develop a procedure that VDOT could use to assess its ITS data quality The report includes a data quality
 assessment procedure that is based on theory practice and empirical investigation The procedure has the following key
 features benchmark data collection using temporary installation of non intrusive detectors data quality assessed at the lane
 level to pinpoint problem detectors data quality assessed at the 1 minute interval or minimum practical measurement interval
 level to provide sufficient quantities of data in reasonable periods of time analysis techniques including both measures and

plots which provide quantitative and visual indications of data quality The authors recommend that VDOT begin to use the procedure on both an ad hoc basis and in a statewide program as a means of protecting its significant investment in ITS data collection
