SERVICE

1. Carefully remove the air cleaner element from the frame.
2. In a well-ventilated area, clean the element in a safe solvent.

CAUTION: Low flash point solvents such as gasoline should not be used as they present a safety hazard.

3. Squeeze the element to dry it. Do not wring it out as the pores may be damaged or the element itself may be ripped.

4. When all dirt has been purged, dry the element thoroughly.

5. Inspect element condition. If it cannot be cleaned effectively, or if the fabric is worn, torn, or otherwise damaged, the element should be replaced.

6. Soak the element in clean SAE 30 motor oil or a commercial air cleaner oil. Squeeze out the excess.

INSTALLATION

1. Pull the element back over the frame.
2. Install the element holder in the air cleaner case engaging the lower end in the slot provided.

3. Grease the element gasket with a light-weight general purpose grease.

4. Slip the element into the case with the gasket side towards the engine. Be sure it is fully seated.

5. Fit the air cleaner cover with the intake tube towards the rear of the machine.

6. Be sure to hook the lip on the front edge of the cover under the forward edge of the case.

7. Secure the cover screws.

Petcock

1. The fuel petcock is fitted with filter screens on the pipes inside the fuel tank. The petcock should be removed and the screens cleaned after every 90 operating days.

2. The procedure involves removing the fuel tank. Refer to "Fuel Systems" for procedure.

Carburetor

1. Although a thorough cleaning of the carburetor necessitates its removal from the machine, water and foreign matter can be removed from the float bowl by unscrewing the float bowl drain plug and allowing the gasoline to drain into a suitable container.

CAUTION: Be sure to do this in a well-ventilated area a safe distance from sparks or open flames.

2. Check the drained gasoline for foreign matter, water, etc. If there appears to be a fair amount of it, check that the air filter is clean and properly installed.

3. Turn the petcock to the "RES" position with the drain plug unscrewed and watch the gasoline which drains out. If it has more foreign matter in it, the tank should be removed and purged and the petcock filter screens should be cleaned.

4. If flow from the carburetor float bowl seems sluggish, a clogged filter or clogged fuel cap vent may be the problem. Check the fuel system and clean it thoroughly. Refer to "Fuel Systems" for procedure.
