Midlatitude Synoptic Meteorology Gary Lackmann, 2011 Introduces a systematic applied approach to meteorological education that allows well established theoretical concepts to be applied to modernized observational and numerical datasets

Synoptic-dynamic Meteorology Lab Manual Gary Lackmann, Brian E. Mapes, Kevin R. Tyle, 2011 *Midlatitude Synoptic Meteorology* Gary Lackmann, 2013 The past decade has been characterized by remarkable advances in meteorological observation computing techniques and data visualization technology However the benefit of these advances can only be fully realized with the introduction of a systematic applied approach to meteorological education that allows well established theoretical concepts to be applied to modernized observational and numerical datasets Designed for use with the companion textbook *Midlatitude Synoptic Meteorology* this CD rom takes just such an educational approach reinforcing lessons on synoptic dynamic meteorology synoptically driven mesoscale phenomena numerical weather prediction ensemble prediction and more The PowerPoint slides and additional resources on the CD will help form the basis of lectures and classroom work The textbook lecture slides and lab manual were developed to be used in concert with topics considered in an order that reinforces and builds upon new knowledge in meteorological observation and forecasting week to week

Holton, Gregory J. Hakim, 2013 During the past decade the science of dynamic meteorology has continued its rapid advance The scope of dynamic meteorology has broadened considerably Much of the material is based on a two term course for seniors majoring in atmospheric sciences This book presents a cogent explanation of the fundamentals of meteorology and explains storm dynamics for weather oriented meteorologists It discusses climate dynamics and the implications posed for global change The new edition has added a companion website with MATLAB exercises and updated treatments of several key topics

Provides clear physical explanations of key dynamical principles Contains a wealth of illustrations to elucidate text and equations plus end of chapter problems Holton is one of the leading authorities in contemporary meteorology and well known for his clear writing style Instructor's Manual available to adopters NEW IN THIS EDITION A companion website with MATLAB exercises and demonstrations Updated treatments on climate dynamics tropical meteorology middle atmosphere dynamics and numerical prediction Mesoscale Meteorological Modeling Roger A Pielke Sr, 2013-10-08 The 3rd edition of Mesoscale Meteorological Modeling is a fully revised resource for researchers and practitioners in the growing field of meteorological modeling at the mesoscale Pielke has enhanced the new edition by quantifying model capability uncertainty by a detailed evaluation of the assumptions of parameterization and error propagation Mesoscale models are applied in a wide variety of studies including weather prediction regional and local climate assessments and air pollution investigations Broad expansion of the concepts of parameterization and parameterization methodology Addition of new modeling approaches including modeling summaries and summaries of data sets All new section on dynamic downscaling

Cyclone Craig E. Jakus, 1995 The short term teleconnections arising from an individual tropical cyclone in the western Pacific typhoon Seth October 1994 were examined using an operational global data assimilation system and numerical weather prediction model During the data assimilation the model's initial conditions were modified using a tropical cyclone bogus procedure that either maintained or eliminated the individual storm These different initial conditions were used in six extended range forecasts of about 3-5 weeks duration Three of these forecasts simulated the atmosphere with the tropical cyclone and three without the storm The ensemble average differences between the forecasts with the storm and those without it were used to infer the global teleconnection response to the tropical cyclone This response was dominated by a strong and persistent Rossby wave train that extended from east Asia across the North Pacific into North America This wave train was initiated when an anticyclonic circulation formed near Japan as the tropical cyclone approached the east Asian jet The anticyclone formation was primarily the result of two factors 1 vortex stretching and 2 absolute vorticity advection as divergent outflow from the tropical cyclone crossed the large absolute vorticity gradient of the east Asian jet The wave response was quasi stationary However the basic wave train i.e. the teleconnection pattern developed within a week due to a relatively rapid eastward propagation of wave energy across the North Pacific and North America In regions of strong jet flow this propagation tended to parallel the flow while in regions of weaker flow the propagation had stronger poleward or equatorward components The wave train intensified well after the tropical cyclone and the initial wave formation process had dissipated
