Morphologically complex words in the mind/brain Alina Leminen, Harald Clahsen, Minna Lehtonen, Mirjana Bozic, 2016-04-07 The question of how morphologically complex words are represented and processed in the brain has been one of the most hotly debated topics in the cognitive neuroscience of language Do complex words engage cortical representations and processes equivalent to single lexical objects or are they processed as sequences of separate morpheme like units Research on morphological processing has suggested that adults make efficient use of both lexical i e whole word storage and retrieval as well as combinatorial computation in processing morphologically complex words Psycholinguistic studies have demonstrated that processing of complex words can be affected both by properties of the morphemes and the whole words such as their frequency transparency and regularity Furthermore this research has been informative about the time course of complex word recognition and production and the role of morphological structure in these processes At the neural level left hemisphere inferior frontal and superior temporal areas and negative going event related potentials have been consistently associated with morphological processing While most previous research has been done on the recognition of morphologically complex words in adult native speakers much less is known about neurocognitive processes involved in the on line production of morphologically complex words and even less on morphological processing in children and non native speakers Moreover we have limited understanding of how linguistically distinct morphological processes e g inflectional versus derivational are handled by the cortical language networks This e book provides an up to date overview of the questions currently addressed in the field of morphological processing It highlights the significance of morphological information in language processing both written and spoken as assessed by a variety of methods and approaches It also provides a comprehensive range of research and development tools for the development of new technologies

Features and Processing in Agreement Simona Mancini, 2018-10-19 How do we comprehend language Does our brain differentiate among the different types of grammatical and conceptual information that each sentence we read and listen to contains Are these mechanisms sensitive to cross linguistic similarities and differences To answer these questions this book provides a comprehensive overview of existing experimental and theoretical studies on language processing Special emphasis is given here to the analysis of basic building blocks of language features and to an approach that relies on the fruitful interaction among theoretical linguistics psycholinguistics and neuroscience Context in Communication: A Cognitive View

Gabriella Airenti, Marco Cruciani, Alessio Plebe, 2017-04-03 Context is what contributes to interpret a communicative act beyond the spoken words It provides information essential to clarify the intentions of a speaker and thus to identify the actual meaning of an utterance A large amount of research in Pragmatics has shown how wide ranging and multifaceted this concept can be Context spans from the preceding words in a conversation to the general knowledge that the interlocutors supposedly share from the perceived environment to features and traits that the participants in a dialogue attribute to each other This last category is also very broad since it includes mental and emotional states together with culturally constructed knowledge such as the reciprocal identification of social roles and positions The assumption of a cognitive point of view brings to the foreground a number of new questions regarding how information about the context is organized in the mind and how this kind of knowledge is used in specific communicative situations A related very important question concerns the role played in this process by theory of mind abilities ToM both in typical and atypical populations In this Research Topic we bring together articles that address different aspects of context analysis from theoretical and empirical perspectives integrating knowledge and methods derived from Philosophy of language Linguistics Cognitive Science Cognitive Neuroscience Developmental and Clinical Psychology **Eye Tracking in Second Language**

developing their theoretical and statistical repertoires experienced scholars looking to expand their own research and eye tracking professionals Learning a non-native language in a naturalistic environment: Insights from behavioural and neuroimaging research Christos Pliatsikas,Vicky Chondrogianni,2015-09-02 It is largely accepted in the relevant literature that successful learning of one or more non native languages is affected by a number of factors that are independent of the target language s per se these factors include the age of acquisition AoA of the target language s the type and amount of formal instruction the learners have received as well as the amount of language use that the learners demonstrate Recent experimental evidence suggests that one crucial factor for efficient native like performance in the non native language is the amount of naturalistic exposure or immersion that the learners receive to that language This can be broadly defined as the degree to which language learners use their non native language outside the classroom and for their day to day activities and usually presupposes that the learners live in an environment where their non native language is exclusively or mostly used Existing literature has suggested that linguistic immersion can be beneficial for lexical and semantic acquisition in a non native language as well as for non native morphological and syntactic processing More recent evidence has also suggested that naturalistic learning of a non native language can also have an impact on the patterns of brain activity underlying language processing as well as on the structure of brain regions that are involved expressed as changes in the grey matter structure This Research Topic brings together studies on the effects of learning and speaking a non native language in a naturalistic environment These include more efficient or native like processing in behavioural tasks tapping on language lexicon morphology syntax as well as changes in the brain structure and function as revealed by neuroimaging studies

canons for palaces in Ancient Egypt In addition the understanding of Ancient Egyptian palaces is amplified with specialised studies regarding architectural and administrative terminology The combined evidence shows that there was indeed a variability in function in architecture and in the physical situation of palaces in Ancient Egypt Besides a common space program such as the succession of courtyard portico vestibule throne room and the intimate part of the palace one may observe a variability of the number of aisles or of columns present as well as in the thickness of walls This fact points to hierarchical rules concerning the importance of the building As the architecture is often preserved only in its foundations it is important to learn what kind of walls were load bearing what the size of division walls is and which kind of walls once carried columns All these first observations have to undergo an evaluation process before one can think of discovering a building canon A general introducing section is followed by contributions covering Ancient Egyptian palaces from Predynastic times until the New Kingdom More contributions on the subject will follow in the second volume which will deal mainly with Ancient Near Eastern Palaces as outcome of a palace workshop at the 10th ICAANE held in 2016 in Vienna Together these two volumes will contribute to a better understanding of the architectural canon and diversity of palaces in Ancient Egypt and the difference in concept to their Ancient Oriental counterparts ce from SAV1 North underlines the important role Sai plays in understanding settlement patterns in New Kingdom Nubia Journal of the Physical Society of Japan ,2014
