Nanotechnology has revolutionized the approach to designing and developing novel drug delivery systems The last two decades have seen a great interest in the use of nanotechnology to offer efficient ways of delivering new and existing drugs and macromolecules The focus of this book is the application of nanotechnology to deliver drugs and biological agents by the mucosal routes of administration i e nasal pulmonary buccal and oral routes It provides an overview of nanotechnology in drug delivery with a description of different types of nanoparticles methods of preparation and characterization and functionalization for site specific drug delivery The emphasis is on the use of nanoparticles in treating various cancers and infectious diseases It broadens the use of nanoparticles by including biologics including vaccines and immunotherapies apart from drugs and acknowledges the concerns around the potential toxicity of nanoparticles to the host several chapters will discuss the biodistribution of these nanoparticles when mucosal routes of administration are employed Further the interaction of nanoparticles with the host s immune cells is discussed Moreover it reviews the regulatory aspects of nanotechnology in product development especially when delivered by the mucosal route of administration Lastly discusses the challenges and opportunities to manufacture nanoparticles on an industrial scale This book is the first of its kind to focus

on the design development and delivery of nanoparticles when administered by different mucosal routes

Sustainable Preparation of Metal Nanoparticles Rafael Luque, Rajender S. Varma, 2013 This timely publication bridges and presents the latest trends and updates in three hot topics of current and future society nanomaterials energy and environment It provides the state of the art as well as current challenges and advances in the sustainable preparation of metal nanoparticles and their applications The book fills a critical gap in a multidisciplinary area of high economic social and environmental importance Currently there are no books published that deal with these ever increasing important topics as most books in this area focus on a particular topic eg nanomaterials or catalysis or energy or environment This is the first multidisciplinary edited book covering the very basics to the more advanced trendy developments containing a unique blend of nano green renewable and bio
