societal majority language in one context and the heritage language in another While the number of empirical studies on language acquisition and processing in heritage language bilingualism has increased in recent years heritage language bilinguals are an understudied subgroup of bilinguals When examined as adults heritage speaker bilinguals tend to show significant differences in their heritage language performance use and competence grammatical knowledge from one another This variation is particularly unusual because heritage speakers like monolinguals are native speakers of the heritage language

Investigating Grammar in Autism Spectrum Disorders Anna Gavarró,Stephanie Durrleman,2018-08-21
Autism Spectrum Disorder ASD hereafter is a neurodevelopmental condition characterized by deficits in communicative and social skills The vast majority of research on language in ASD has focused on pragmatic difficulties while less is known about structural aspects of language in this population Work on syntax and phonology is not only sparse but the heterogeneity in these grammatical domains has moreover led to conflicting reports that they are either intact or impaired More remains to be understood about variations in grammatical profiles in ASD as well as the relation of grammar to other cognitive abilities The body of research gathered here increases our understanding of the grammatical strengths and weaknesses in ASD The contributions carefully elucidate the relations between grammar and other areas of cognition as well as unveil the similarities and differences of grammar in ASD compared to other conditions The result is a volume that provides new ways to think about language and communication in ASD and beyond which should be of interest to both linguists and clinicians
