

Gene Expression—Transcription

How is mRNA synthesized and what message does it carry?

Why?

DNA is often referred to as a genetic blueprint. In the same way that blueprints contain the instructions for construction of a building, the DNA found inside the nuclei of cells contains the instructions for assembling a living organism. The DNA blueprint carries its instructions in the form of genes. In most cases the genes direct the production of a polypeptide, from which other more complex proteins, such as enzymes or hormones, may be constructed. These polypeptides and other molecules run the organism's metabolism and, in multicellular organisms, dictate what each cell's job is. So, what is the language of these instructions and how are they read and decoded by the cellular organelles? This activity will focus on the decoding of genes in eukaryotes.

It is alleged that creeds tend inevitably to ossification that the vitality of religions is almost lost itself in their development that the ornaments of ritual serve only to obscure the Light which they profess to adorn and magnify Nothing throughout history has been more painfully demonstrated than the barriers to brotherhood built up by religions a rivalry often more fully emphasized than softened by missionary zeal Yet the Source of Spirituality must be One even as God is One and the differing languages and systems by means of which spirituality strives to assert itself although they go far in the direction of perpetuating division between races and men they have after all One common origin the Word lying dim and only partially realizable in the shadow of a time long ago There are two minds as it was written about the trees in the Garden of Eden The tree of the knowledge of good and evil and the Tree of Life This Key determined these things specifically by discerning appropriate definitions in order to find out the sum of the whole matter *The Eight Stages of Translation* Robert Bly,1983 Found in Translation S C Scott,2017-03-29
