LEARNING OBJECTIVES:

- Identify and describe the cell structures involved in transport of materials into, out of, and throughout the cell
 - Describe how the structure of the plasma membrane allows it to function as a regulatory structure and/or protective barrier for a cell
 - Compare the mechanisms that transport materials across the plasma membrane (i.e., passive transport – diffusion, osmosis, facilitated diffusion; and active transport – pumps, endocytosis, exocytosis)
 - Describe how membrane-bound cellular organelles (e.g., endoplasmic reticulum, Golgi apparatus) facilitate the transport of materials within a cell
- Explain mechanisms that permit organisms to maintain biological balance between their internal and external environments
 - Explain how organisms maintain homeostasis (e.g. thermoregulation, water regulation, oxygen regulation)

Main Concept 1: Describe how the structure of the plasma membrane allows it to function as a regulatory structure and/or protective barrier for a cell

- Cell Membrane** - surrounds the cell. It plays an active role in determining which substances enter and exit the cell. Some substances can pass freely through the cell membrane and others cannot, the membrane is said to be selectively permeable, or semipermeable. The cell membrane is composed primarily of lipids (phospholipids), proteins, and carbohydrates.
- Phospholipids** - have a polar, hydrophilic (water loving) phosphate head and 2 nonpolar hydrophobic (water fearing) fatty acid tails. They arrange themselves in a double layer (phospholipid bilayer) so that the heads face the outer and inner cell surfaces and the tails are sandwiched in between.
- Cholesterol** – small molecules inserted between the lipids, help to maintain membrane fluidity and prevent membrane from freezing at low temperatures.
- Membrane proteins** – different types of proteins are embedded in the membrane to perform different functions such as transport of materials, and enzymes to regulate reactions.
- Carbohydrates** – used for cell to cell communication and cell identification

*Fluid Mosaic Model - **model** that describes the structure of cell membranes. In this **model**, a flexible layer made of lipid molecules is interspersed with large protein molecules that act as channels through which other molecules enter and leave the cell
