Algorithms, Probability, Networks, and Games Christos Zaroliagis, Grammati Pantziou, Spyros Kontogiannis, 2015-09-07

This Festschrift volume is published in honor of Professor Paul G Spirakis on the occasion of his 60th birthday. It celebrates his significant contributions to computer science as an eminent talented and influential researcher and most visionary thought leader with a great talent in inspiring and guiding young researchers. The book is a reflection of his main research activities in the fields of algorithms, probability, networks, and games and contains a biographical sketch as well as essays and research contributions from close collaborators and former PhD students. Cambridge International AS and A Level

Mathematics: Mechanics Coursebook Jan Dangerfield, Stuart Haring, 2018-03-22. This series has been developed specifically for the Cambridge International AS/A Level Mathematics 9709 syllabus to be examined from 2020. Cambridge International AS/A Level Mathematics: Mechanics matches the corresponding unit of the syllabus with clear and logical progression through it. It contains materials on topics such as velocity and acceleration, force and motion, friction, connected particles, motion in a straight line, momentum and work and energy. This coursebook contains a variety of features including recap sections for students to check their prior knowledge, detailed explanations and worked examples, end of chapter and cross-topic review exercises, and Explore tasks to encourage deeper thinking around mathematical concepts. Answers to coursebook questions are at the back of the book. **Cambridge International AS and A Level Mathematics: Mechanics 2 Coursebook**

Douglas Quadling, Julian Gilbey, 2016-07-14. Cambridge AS and A Level Mathematics is a revised series to ensure full syllabus coverage. This coursebook has been revised and updated to ensure that it meets the requirements for the Mechanics 2 M2 unit of Cambridge AS and A Level Mathematics 9709. This revised edition adds clarifications to sections on motion of a projectile, equilibrium of a rigid body, and linear motion under a variable force. All of the review questions have been updated to reflect changes in the style of questions asked in the course. Research for Educational Change Jill Adler, Anna Sfard, 2016-06-17. Research for Educational Change presents ways in which educational research can fulfil its commitments to educational practice. Focussing its discussion within the context of mathematics education, it argues that while research-generated insights can have beneficial effects on learning and teaching, the question of how these effects are to be generated and sustained is far from evident. The question of how to turn research into educational improvement is discussed here in the context of learning and teaching hindered by poverty and social injustice. In the first part of the book, four teams of researchers use different methodologies while analysing the same corpus of data collected in a South African mathematics classroom. In the second part, each of these teams makes a specific proposal about what can be done and how so that its research-generated insights have a tangible beneficial impact on what is happening in mathematical classrooms. Combining two discourses—that of researchers speaking to one another and that of researchers communicating their insights to those responsible for educational practice—the book deals with the perennial question of communication between those who study

educational processes and those who are directly responsible for teacher education educational research and classroom practices This book will be key reading for postgraduates researchers and academics in education and particularly in the areas of mathematics education education research teacher education and classroom practice It will also appeal to teacher educators practitioners and undergraduate students interested in educational research **On My Own** Xueli
