May 2013 Ib Paper 1 French:

Governance in Transition Ján Buček, Andrew Ryder, 2015-04-15 This book looks at experience in government restructuring and devolution from a variety of national and international perspectives both within the European Union and elsewhere focusing on lessons learned and ways forward Since the 1980s there has been a global trend to give more power to local governments Even in Korea and the United Kingdom the most centralised countries in the OECD local government powers have increased with substantial economic benefits Within the European Union the principle of subsidiarity has enshrined the idea of devolution New member states particularly in central and eastern Europe have significantly created new and self sufficient local and regional governments However this process has been complicated Devolution is not a panacea in its own right and need not lead to economic growth While it can encourage savings through collaboration it can also lead to confused lines of authority and can complicate policy formation and implantation Devolution can strain local budgets forcing local governments to rely on their own sources of finance rather than central government transfers Suburbanisation rural depopulation the growth of some regions and the decline of others have raised new problems particularly related to inter governmental cooperation among local governments and different levels of government In many cases an increased number of governments has increased administrative costs

Social Housing in the Middle East Mohammad Gharipour, Kivanc Kilinc, 2019-03-01 As oil rich countries in the Middle East are increasingly associated with soaring skyscrapers and modern architecture attention is being diverted away from the pervasive struggles of social housing in those same urban settings Social Housing in the Middle East traces the history of social housing both gleaming postmodern projects and bare bones urban housing structures in an effort to provide a wider understanding of marginalized spaces and their impact on identities communities and class While architects may have envisioned utopian or futuristic experiments these buildings were often constructed with the knowledge and skill sets of local workers and the housing was in turn adapted to suit the modern needs of residents This tension between local needs and national aspirations are linked to issues of global importance including security migration and refugee resettlement The essays collected here consider how culture faith and politics influenced the solutions offered by social housing they provide an insightful look at how social housing has evolved since the 19th century and how it will need to adapt to suit the 21st

Emerging Approaches for Typing, Detection, Characterization, and Traceback of Escherichia coli, 2nd Edition Pina M. Fratamico, Chitrita DebRoy, David S. Needleman, 2018-05-02 Pathogenic Escherichia coli strains cause a large number of diseases in humans including diarrhea hemorrhagic colitis hemolytic uremic syndrome urinary tract infections and neonatal meningitis while in animals they cause diseases such as calf scours and mastitis in cattle post weaning diarrhea and edema disease in pigs and peritonitis and airsacculitis in chickens The different E coli pathotypes are characterized by the presence of specific sets of virulence related genes Therefore it is not surprising that pathogenic E coli constitutes a genetically heterogeneous family of

bacteria and they are continuing to evolve Rapid and accurate molecular methods are critically needed to detect and trace pathogenic E coli in food and animals They are also needed for epidemiological investigations to enhance food safety as well as animal and human health and to minimize the size and geographical extent of outbreaks The serotype of E coli strains has traditionally been determined using antisera raised against the 180 different O somatic and 53 H flagellar antigens However there are many problems associated with serotyping including it is labor intensive and time consuming cross reactivity of the antisera with different serogroups occurs antisera are available only in specialized laboratories and many strains are non typeable Molecular serotyping targeting O group specific genes within the E coli O antigen gene clusters and genes that are involved in encoding for the different flagellar types offers an improved approach for determining the E coli O and H groups Furthermore molecular serotyping can be coupled with determination of specific sets of virulence genes carried by the strain offering the possibility to determine O group pathotype and the pathogenic potential simultaneously Sequencing of the O antigen gene clusters of all of the known O groups of E coli is now complete and the sequences have been deposited in the GenBank database The sequence information has revealed that some E coli serogroups have identical sequences while others have point mutations or insertion sequences and type as different serogroups in serological reactions There are also a number of other ambiguities in serotyping that need to be resolved Furthermore new E coli O groups are being identified Therefore there is an essential need to resolve these issues and to revise the E coli serotype nomenclature based on these findings There are emerging technologies that can potentially be applied for molecular serotyping and detection and characterization of E coli On a related topic the genome sequence of thousands of E coli strains have been deposited in GenBank and this information is revealing unique markers such as CRISPR clustered regularly interspaced short palindromic repeats and virulence gene markers that could be used to identify E coli pathotypes Whole genome sequencing now provides the opportunity to study the role of horizontal gene transfer in the evolution and emergence of pathogenic E coli strains Whole genome sequencing approaches are being investigated for genotyping and outbreak investigation for regulatory and public health needs however there is a need for establishing bioinformatics pipelines able to handle large amounts of data as we move toward the use of genetic approaches for non culture based detection and characterization of E coli and for outbreak investigations
