Mathslit Paper Grade11 March 2014:

The Education Invasion Joy Pullmann, 2017-03-14 Most Americans had no idea what Common Core was in 2013 according to polls But it had been creeping into schools nationwide over the previous three years and children were feeling its effects They cried over math homework so mystifying their parents could not help them even in elementary school They read motley assortments of informational text instead of classic literature They dreaded the high stakes tests in unfamiliar formats that were increasingly controlling their classrooms How did this latest and most sweeping reform of American education come in mostly under the radar Joy Pullmann started tugging on a thread of reports from worried parents and frustrated teachers and it led to a big tangle of history and politics intrigue and arrogance She unwound it to discover how a cabal of private foundation honchos and unelected public officials cooked up a set of rules for what American children must learn in core K 12 classes and how the Obama administration pressured states to adopt them Thus a federalized education scheme took root despite legal prohibitions against federal involvement in curriculum Common Core and its testing regime were touted as an absolute game changer in public education yet the evidence so far suggests that kids are actually learning less under it Why then was such a costly and disruptive agenda imposed on the nation s schools Who benefits And how can citizens regain local self governance in education so their children s minds will be fed a more nourishing intellectual diet and be protected from the experiments of emboldened bureaucrats The Education Invasion offers answers and remedies *Mathematics*

Literature, and Psychology in Action Philip Davis, Rhiannon Corcoran, Josie Billington, Arthur Frank, 2023-06-23 Psychology in Action is a term coined by the Guest Editors from the Centre for Research into Reading Literature and Society CRILS University of Liverpool in their work in filming recording and analyzing shared reading groups led by The Reader organization. It refers both to the work of psychology within literary texts and to the responses of multifarious reader participants to literature read live and aloud in small community groups within a variety of settings. In particular, psychology in action has meant seeing readers suddenly activated into deep personal thinking responding to situations imaginatively simulated by reading literature in ways that trigger surprised and involuntary emotion, autobiographical memory and spontaneous empathy.

Connecting People to Their Oceans: Issues and Options for Effective Ocean Literacy Angel Borja, Francesca Santoro, Gail Scowcroft, Stephen Fletcher, Pierre Strosser, 2020-03-25 While there is growing evidence of the importance of marine ecosystems for our societies, evidence shows also that pressures from human activities on these ecosystems are increasing, putting the health of marine ecosystems at stake worldwide. Hence Blue Economy is becoming an important component of future socio-economic development strategies. e.g. this is called Blue Growth in Europe that eventually can result in increasing pressures at sea and despite the current regulatory framework in particular with the Oceans Act in USA or Canada and the Marine Strategy Framework Directive in Europe it is likely that this situation will continue in the future. Ensuring all those connected to the sea directly or indirectly gain a better understanding of the importance of the seas, the human-sea interactions and opportunities to act better and reduce impacts from human pressures is central to Ocean Literacy (OL). Receiving increasing attention in Europe and USA, OL is a challenge for all parts of society: educators, the role OL could play in interaction with innovation, regulation, economic incentive, social norms to support human capital development as a key component of sustainable growth and 3 pre-conditions for effective OL for different sectors and target groups. Questions relevant to OL include: Which knowledge produced by whom to share and how? Who to target and how to effectively reach those targeted? How to design OL initiatives including by mobilizing those targeted via living lab approaches? e.g. to ensure effective OL and pave the way for behavior change. What are the knowledge gaps that limit our capacity to design effective OL? As scientists, it is likely you have many more questions to offer and discuss.

Playful STEAM Learning in the Early Years Amanda Sullivan, Amanda Strawhacker, Decades of research has shown that introducing STEM content like coding and engineering during the foundational early childhood years can lead to many benefits such as improving children's number sense, problem-solving skills and sequencing ability. Unfortunately, the costs of STEM technologies can be a barrier for many early childhood educators. Additionally, many digital tools and apps are not playful or developmentally appropriate for young learners and can be less inclusive of students who have been historically excluded from STEM. This book addresses these barriers by demonstrating how to leverage an interdisciplinary STEAM (Science, Technology, Engineering, Arts and Mathematics) approach to pique the curiosity of young students through play-based

learning The authors provide evidence based hands on approaches as well as a practical framework to effectively integrate STEAM learning in the early grades pre K to third grade Readers will explore new ways to play alongside their young learners to make powerful STEAM discoveries and foster a lifelong love of learning Book Features Provides tips and strategies rooted in existing frameworks and guidelines as well as the authors original research on the cognitive and socioemotional benefits of STEAM experiences Empowers early childhood educators working in any setting informal formal or home settings Describes a new framework for the equitable design and implementation of play based STEAM learning in early childhood settings
