Geometry Steven G. Krantz, 2016-03-17 In this original text prolific mathematics author Steven G Krantz addresses conformal geometry a subject that has occupied him for four decades and for which he helped to develop some of the modern theory This book takes readers with a basic grounding in complex variable theory to the forefront of some of the current approaches to the topic Along the way the author notes in his Preface the reader will be exposed to some beautiful function theory and also some of the rudiments of geometry and analysis that make this subject so vibrant and lively More up to date and accessible to advanced undergraduates than most of the other books available in this specific field the treatment discusses the history of this active and popular branch of mathematics as well as recent developments Topics include the Riemann mapping theorem invariant metrics normal families automorphism groups the Schwarz lemma harmonic measure extremal length analytic capacity and invariant geometry A helpful Bibliography and Index complete the text

Optimization in Function Spaces Amol Sasane, 2016-04-10 This highly readable volume on optimization in function spaces is based on author Amol Sasane's lecture notes which he developed over several years while teaching a course for third year undergraduates at the London School of Economics The classroom tested text is written in an informal but precise style that emphasizes clarity and detail taking students step by step through each subject Numerous examples throughout the text clarify methods and a substantial number of exercises provide reinforcement Detailed solutions to all of the exercises make this book ideal for self study The topics are relevant to students in engineering and economics as well as mathematics majors Prerequisites include multivariable calculus and basic linear algebra The necessary background in differential equations and elementary functional analysis is developed within the text offering students a self contained treatment **The Schwarz**

Computer Algebra Systems Michael J. Wester, 1999-07-16 This thorough overview of the major computer algebra symbolic mathematical systems compares and contrasts their strengths and weaknesses and gives tutorial information for using these systems in various ways Compares different packages quantitatively using standard test suites Ideal for assessing the most appropriate package for a particular user or application Examines the performance and future developments from a user's and developer's viewpoint Internationally recognized specialists overview both the general and special purpose systems and discuss issues such as denesting nested roots complex number calculations efficiently computing special polynomials solving single equations and systems of polynomial equations computing limits multiple integration solving ordinary differential and nonlinear evolution equations code generation evaluation and computer algebra in education The historical origins computer algebra resources and equivalents for many common operations in seven major packages are also covered By providing such a comprehensive survey the experienced user is able to make an informed decision on which system's he or she might like to use It also allows a user new to computer algebra to form an idea of where to begin Since each system looked at in this book uses a different language many examples are included to aid the user in adapting to these language differences These examples can be used as a guide to using the various systems once one understands the basic principles of one CAS The book also includes contributions which look at the broad issues of the needs of various users and future developments both from the user's and the developer's viewpoint The author is a leading figure in the development and analysis of mathematical software and is well known through the Wester test suite of problems which provide a bench

mark for measuring the performance of mathematical software systems The book will help develop our range of titles for applied mathematicians The book will provide a unique fully up to date and independent assessment of particular systems and will be of interest to users and purchasers of CAS s
