Hobbs,1981 Throughout the history of warfare at sea navigation has been an important basic determinant of victory Occasionally new members of the fraternity of the sea will look upon navigation as a chore to be tolerated only as long as it takes to find someone else to assume the responsibility In my experience such individuals never make good naval officers Commander Hobbs has succeeded in bringing together the information and practical skills required for that individual who would take the first step down the road toward becoming a competent marine navigator At the outset of this book the author stresses the necessity for safe navigation but there is another basic tenet of sea warfare that this book serves The best weapons system man has ever devised cannot function effectively unless it knows where it is in relation to the real world where it is in relation to the enemy and where the enemy is in relation to the real world Not all defeats can be attributed to this lack of information but no victories have been won by those who did not know where they were Life Support Systems Design Marshall L. Tucker,1996 Whether in freezing arctic tundra or blazing deserts human beings have been figuring out how to adapt to hostile environments for centuries New challenges emerge however as we venture to places where we are truly unable to exist without technology When it comes to surviving underwater a thorough knowledge of human physiology must be combined with a firm grasp of engineering principles and Life Support Systems Design provides the student with an extensive grounding in both A reference text for any beginning life support systems engineer it also serves as a refresher course for more experienced divers The text particularly emphasizes the effects of hyperbaric exposures on the diver's ability to function but it also explores underwater physics including the transport of light heat and

gases in detail It reviews the practical technological aspects of life support system engineering such as gas storage and delivery systems and environmental control design Finally once the textbook has been absorbed the authors encourage the student to design a life support system for a specified application Armed with the knowledge gained from Life Support Systems Design it seems like a project any student would ace
