*Microbial Source Tracking: Methods, Applications, and Case Studies* Charles Hagedorn, Anicet R. Blanch, Valerie J. Harwood, 2011-06-08 Understanding the origin of fecal pollution is essential in assessing potential health risks as well as for determining the actions necessary to remediate the quality of waters contaminated by fecal matter As a result microbial source tracking MST has emerged as a field that has evolved and diversified rapidly since the first approaches were described only a decade ago In response to the emergence of MST there have been three large multi laboratory method comparison studies two in the US and one in Europe plus numerous workshops book chapters and review articles dedicated to synthesizing information on the topic Furthermore a federal USEPA guide document describing the uses and limitations of MST methods was published in 2005 and a book dedicated to MST as an emerging issue in food safety was published in 2007 These documents provide a collective body of literature on MST that is both conflicting and complementary often repetitious and difficult to condense and interpret In addition it does not reflect the current diversity of MST approaches with different organisms newer methodologies such as quantitative PCR and anthropogenic chemicals nor does it embrace the scope of MST research being conducted around the world The three editors of the book all with extensive MST expertise have developed chapters and invited authors who reflect the rich diversity and truly international scope of MST The unifying theme throughout the book is the design of more standardized approaches to MST that include performance criteria regardless of method or organism plus recommendations for field study design and MST implementation The editors intend that this book will serve as a valuable reference for all those who are involved with *Manual of Environmental Microbiology* Cindy H. Nakatsu, Robert V. Miller, Suresh D. treatment and biotechnology      *Case Studies in Infectious Disease* Peter Lydyard, Michael Cole, John Holton, Will Irving, Nino Porakishvili, Pradhib Venkatesan, Kate Ward, 2021-04-25 *Case Studies in Infectious Disease* presents forty case studies featuring the most important human infectious diseases worldwide. Written for students of microbiology and medicine, this book describes the natural history of infection from point of entry of the pathogen through pathogenesis followed by clinical presentation, diagnosis, and treatment. Five core sets of questions are posed in each case: What is the nature of the infectious agent? how does it gain access to the body? what cells are infected and how does the organism spread? What are the host defense mechanisms against the agent and how is the disease caused? What are the typical manifestations of the infection and the complications that can occur? How is the infection diagnosed and what is the differential diagnosis? How is the infection managed and what preventative measures can be taken to avoid infection? This standardized approach provides the reader with a logical basis for understanding these diverse and medically important organisms, fully integrating microbiology and immunology throughout.      **National Library of Medicine Audiovisuals Catalog** National Library of Medicine (U.S.),
