

# MOTHERHOOD DURING COVID-19

## How to Balance Your Child's Nutrition

### How can I protect my newborn from Covid-19?

To protect your baby's immunity, breastfeeding provides the best immunisation by passing antibodies to your baby. Within the first six months of birth, breast milk contains all the best antibodies. Breast milk also provides natural protection to support your baby's immunity and healthy growth. The exclusive first breastfeeding is the best way to protect against infections and strengthen newborn immunity.

By breastfeeding your baby for the first six months, you can protect your baby from Covid-19. It is also the best way to protect your baby's immunity and healthy growth. The exclusive first breastfeeding is the best way to protect against infections and strengthen newborn immunity.

### How long should I breastfeed my child for it to be beneficial?

Some mothers may choose to breastfeed for a few weeks when their baby is born, or breastfeed for up to 12 months. Depending on how long you breastfeed your child, you can protect your baby from Covid-19. The exclusive first breastfeeding is the best way to protect against infections and strengthen newborn immunity.

#### 01 First Six Months

Your first breast milk, also known as colostrum, has a high concentration of antibodies and other immune properties that protect your newborn against Covid-19. The exclusive first breastfeeding is the best way to protect against infections and strengthen newborn immunity.

#### 02 First Six Months

The American Academy of Pediatrics (AAP) recommends exclusively breastfeeding the baby until they are at least 6 months old, as breast milk provides optimal nutrition for the baby for the first six months of life. Your breast milk composition also changes with time to meet the baby's changing needs during the first six months.

#### 03 Beyond Six Months

Beyond 6 months, breast milk alone will no longer be able to provide all the nutrition required for growth and development. Your child's diet has to be supplemented with complementary foods like formula or solids. Most babies start to show signs of weaning, usually around the sixth month, but mothers can introduce appropriate solid foods to infants at any time after 6 months and before the end of 1 completed month.
