

Topic assessment

- In this question you must show detailed reasoning.  
Which is more likely, never getting a 6 when rolling a fair die six times, or never getting a double 6 when rolling a pair of fair dice 36 times? [4]
- In the sixth form at Eastport School, there are 45 students studying at least one of the three sciences, Biology, Chemistry and Physics.

The diagram below shows the number of students studying each science.

- Find the probability that one of these students, selected at random, is studying
    - Physics
    - Chemistry
    - both Physics and Chemistry. [3]
  - Two students are selected at random. Find the probability that both are studying just one science and that they are not both studying the same science. [4]
- The probability distribution of a discrete random variable  $X$  is given by:

$$P(X = r) = k(6r^2 - r^3) \quad \text{for } r = 1, 2, 3, 4, 5$$

$$P(X = r) = 0 \quad \text{otherwise}$$

- Show that  $k = \frac{1}{105}$ . [3]

Two values of  $X$  are chosen at random.

- Find the probability that the product of the two values is even. [3]

Assessing Fault Model and Test Quality Kenneth M. Butler, M. Ray Mercer, 2012-12-06 For many years the dominant fault model in automatic test pattern generation ATPG for digital integrated circuits has been the stuck at fault model The static nature of stuck at fault testing when compared to the extremely dynamic nature of integrated circuit IC technology has caused many to question whether or not stuck at fault based testing is still viable Attempts at answering this question have not been wholly satisfying due to a lack of true quantification statistical significance and or high computational expense In this monograph we introduce a methodology to address the question in a manner which circumvents the drawbacks of previous approaches The method is based on symbolic Boolean functional analyses using Ordered Binary Decision Diagrams OBDDs OBDDs have been conjectured to be an attractive representation form for Boolean functions although cases exist for which their complexity is guaranteed to grow exponentially with input cardinality Classes of Boolean functions which exploit the efficiencies inherent in OBDDs to a very great extent are examined in Chapter 7 Exact equations giving their OBDD sizes are derived whereas until very recently only size bounds have been available These size equations suggest that straightforward applications of OBDDs to design and test related problems may not prove as fruitful as was once thought
