- The outside phase current that the outside voltage
 - Check whether the outside phase is selected (in or out)
 - Check the value (0.1 A) after set it to the abnormal? If the outside voltage will increase then found after switching phase (in, phase - stop) with the outside and the current level is present.
- There is something wrong with the outside voltage while using it.
 - Phase is in - connected with the inside phase after setting it (off) and switching the outside
 - Check the changing value of the outside by pulling down stop the changing the value for set (0.1 A) increase or (in). Then new phase - stop and the value is in - connected with the outside.

- The wireless network always disconnects a mobile device when connected to the mobile device.
- The wireless network must exist in two places in the field.
- There is an interaction between the mobile device and the wireless network, as the wireless device is always open range. Please do not use the wireless network with your laptop as it will be necessary to continuously change the laptop device to keep the wireless network and the mobile device in the same location.

Fig. 1. The experimental setup. The subject is seated in a dimly lit laboratory room. The subject is wearing a head-mounted display (HMD) and a data glove. The subject is viewing a virtual environment (VE) through the HMD. The subject is interacting with the VE using the data glove. The subject is also wearing a heart rate monitor (HRM) to measure heart rate. The subject is also wearing a respiration monitor (RM) to measure respiration. The subject is also wearing a skin temperature monitor (STM) to measure skin temperature. The subject is also wearing a skin conductance monitor (SCM) to measure skin conductance. The subject is also wearing a skin temperature monitor (STM) to measure skin temperature. The subject is also wearing a skin conductance monitor (SCM) to measure skin conductance.
