SERVICE MANUAL MS-10C-IIA

KATO WORKS CO., LTD.

PREFACE

This Manual has been compiled as a handbook for servicing "Compuload", the new automatic digital overload protection device which is fitted to KATO cranes.

Unlike the conventional analog ACS device, the new digital ACS system with its built-in microprocessor has a self-diagnostic function for servicing in addition to its function as an overload protection device. Consequently, while the conventional analog ACS device requires a service log for data collection, this can now be performed by the digital ACS system with its self-diagnostic function. Furthermore, it has become possible to automatically monitor the status of the overload protection device itself during routine crane operations, resulting in improved reliability. However, even the most advanced electronics cannot provide adequate crane control performance unless the procedure is correctly followed by service engineers.

It is therefore recommended that this Manual be read thoroughly so that the appropriate service techniques can be mastered.

Manual of Industrial Microbiology and Biotechnology Arnold L. Demain, Nadine A. Solomon, 1986 This volume is the culmination of the need for a reference that pulls together the biological and engineering methodologies required to develop a successful industrial process from culture isolation and development to useful product The structure of the manual resembles the sequence of operations involved in development of commercial biological processes and products **Official Gazette of the United States Patent and Trademark Office** ,1986 **Fuels and Lubricants Handbook** , **Moody's International Manual** ,1998 **Food Flavours** Philip R. Ashurst, 2012-12-06 The flavour industry has become a vital

element in the growth and success of food and beverage industries worldwide The development of many new products is now directly related to the use of the appropriate flavouring which among other benefits has allowed the use of many novel raw materials The phenomenal growth of specialised consumer products offering special tastes nutritional benefits or convenience almost always directly involves the use of a bespoke flavouring With recent growth in worldwide concern for environmental issues has come a corresponding concern for the use of natural ingredients in foods The flavour industry has been closely involved by offering many of its products as natural alternatives although the vexed issue of what natural means has promoted discussion and debate in many quarters The European Flavouring Directive has attempted to incorporate a definition This is discussed further in chapter 1 The work of the flavourist remains akin to that of the perfumer despite inroads made by sophisticated analytical technology For example use of linked gas chromatography mass spectrometry GC MS instrumentation enables the skilled analyst to identify most components of a competitor's flavouring or the minor ingredients of a natural extract Despite this the industry remains a unique blend of art science and technology in which the experience and knowledge of the flavourist is vital

Ionic Liquids: Properties and Applications Francesca D'Anna, Jason Harper, 2019-10-17 Sustainability defined as the way to meet the needs of the present generation without compromising the ability of future ones to meet their own is one of the main challenges of modern society Within this context chemistry plays a significant role and solvent nature as well as its environmental impact are pivotal issues frequently addressed Ionic liquids i e organic salts that have melting temperatures lower than 100 C have been frequently hailed as alternatives to conventional organic solvents Their greenness has been mainly ascribed to their low vapor pressure and flammability However in addition to this their high solubilizing ability and low miscibility with conventional organic solvents frequently allow for reducing the amount used as well as for their recycling Ionic liquids especially the ones featured by aromatic cations are frequently described as polymeric supramolecular fluids constructed through the establishment of feeble but cooperative supramolecular interactions like Coulomb and interactions as well as hydrogen bonds In general ionic liquids are also indicated as designer solvents as it is possible to tailor their features to specific applications by simply modifying their cation or anion structure In this way small changes in the ion s structure can give rise to solvents showing very different properties The above premises widely justify the growing interest in the properties and applications of ionic liquids seen in recent literature according to Scopus more than 27 000 papers published in the last five years have ionic liquids as a keyword Thanks to their properties they have been variously used as solvent media solvents for the obtainment of gel phases components in the building of dye sensitized solar cells media for the preparation of thermochromic materials etc This Research Topic aims to present how structural features can determine not only the properties of ionic liquids but also their possible employment In this latter case the interest arises from their ability to affect the outcome of a given reaction in terms of rate yield and nature of the products obtained for general use in the field of materials chemistry This article collection is dedicated to Prof Kenneth R Seddon for his outstanding contribution to the formation and development of the ionic liquids community
