# Mndot Road Design Manual

**Louis Franklin Cohn, Roswell A. Harris**

## **Mndot Road Design Manual:**

**Design of Turn Lane Guidelines** Howard Preston, Nicole Farrington, Michael Elder, Minnesota. Department of Transportation. Research Services Section, CH2M HILL (Firm), 2010 The guidance in MnDOT's Road Design Manual relative to the design of turn lanes is at least 35 years old and is reflective of a time when vehicle speed and volume were lower than they are today In response to these current conditions some designers have been providing longer turn lanes However this approach has resulted in inconsistent designs across MnDOT's system In response to concerns about the dated guidance in the Road Design Manual the inconsistent treatment across the system and the lack of a documented design process MnDOT developed and documented a new turn lane design process The suggested design process is based on the notion that turn lanes should be designed to be long enough to accommodate deceleration from the prevailing highway speeds plus the storage needed for left or right turning vehicles The new guidance provides a check list for designers that have links to look up tables for deceleration based on speed storage based on volume of turning vehicles and type of intersection control and adjustments for grades and the fraction of heavy vehicles These guidelines provide a resource for designers that will allow greater consistency between the length of turn lanes and traffic and roadway characteristics *Facilities Development Manual* Wisconsin. Department of Transportation, 1979 *Bicycle Facility Design Manual*, 2020 MnDOT's Bicycle Facility Design Manual is a resource for MnDOT planners and designers to plan for and implement context appropriate bicycle facilities within MnDOT right of way The 2020 Minnesota Bicycle Facility Design Manual supersedes the 2007 Minnesota Bikeway Facility Design Manual This manual provides the information necessary to develop safe consistent and predictable bicycle facilities along MnDOT's trunk highway system Providing connected networks of comfortable and safe bicycle facilities is an important factor to support and increase the use of bicycling for transportation The manual was developed based on national design standards and accepted industry practices in particular the American Association of Highway Transportation Officials Guide for the Development of Bicycle Facilities fourth edition and forthcoming fifth edition The manual should be used in conjunction with the current versions of the MnDOT Road Design Manual and the Minnesota Manual on Uniform Traffic Control Devices The manual is not intended as a legal standard and all design guidance should be considered with engineering judgment Publication website **Design Exception Practices** John Michael Mason, Kevin M. Mahoney, National Cooperative Highway Research Program, 2003 This report describes the range of design exception practices among state transportation agencies STAs and discusses the problems and suggested improvements based on the experience of state agency personnel All STAs are required to comply with the same federal regulation pertaining to design exceptions However the number of design exceptions the circumstances under which they are prepared and the methods employed vary considerably with many factors contributing to this wide range of practice This synthesis characterizes 1 conditions that require a design exception 2 data collection and analysis techniques and 3 internal STA and external rules

The report also describes benefits and problems experienced by STAs and identifies suggestions for improving and streamlining the design exception process. In addition, the innovative practices of two states, New Jersey and Wisconsin, are identified and discussed.

**Transportation Planning Handbook** ITE (Institute of Transportation Engineers), Michael D. Meyer, 2016-07-12. A multi-disciplinary approach to transportation planning fundamentals. The *Transportation Planning Handbook* is a comprehensive practice-oriented reference that presents the fundamental concepts of transportation planning alongside proven techniques. This new fourth edition is more strongly focused on serving the needs of all users, the role of safety in the planning process, and transportation planning in the context of societal concerns, including the development of more sustainable transportation solutions. The content structure has been redesigned with a new format that promotes a more functionally driven multimodal approach to planning, design, and implementation, including guidance toward the latest tools and technology. The material has been updated to reflect the latest changes to major transportation resources, such as the HCM, MUTCD, HSM, and more, including the most current ADA accessibility regulations. Transportation planning has historically followed the rational planning model of defining objectives, identifying problems, generating and evaluating alternatives, and developing plans. Planners are increasingly expected to adopt a more multi-disciplinary approach, especially in light of the rising importance of sustainability and environmental concerns. This book presents the fundamentals of transportation planning in a multidisciplinary context, giving readers a practical reference for day-to-day answers. Serve the needs of all users. Incorporate safety into the planning process. Examine the latest transportation planning software packages. Get up to date on the latest standards, recommendations, and codes. Developed by The Institute of Transportation Engineers, this book is the culmination of over seventy years of transportation planning solutions, fully updated to reflect the needs of a changing society. For a comprehensive guide with practical answers, the *Transportation Planning Handbook* is an essential reference.

**Median Intersection Design for Rural High-speed Divided Highways** T. H. Maze, 2010. This report describes common safety issues at median intersections on rural divided highways and presents innovative geometric and operational treatments for addressing those issues. Ten case studies illustrate how they have been applied in the field. The report includes recommendations for modifications to the AASHTO *A Policy on Geometric Design of Highways and Streets* (Green Book) and the Manual on Uniform Traffic Control Devices (MUTCD).

*MnDOT Selection of Pavement Surface for Road Rehabilitation* Jody Hauer, 2014.
