we have only little knowledge about taste and flavor perception so we do not know what sensory characteristics of foods are liked Also we do not know the mechanisms involved in selecting certain foods For example we know that excessive salt intake induces hypertension and or obesity but often we do not select low salt foods even when suffering from the high blood pressure We also know that animal models e g mice rats consume more of diets that impart a good taste for them As humans however we do not always eat so much of foods that may taste good for us and may consume foods or beverages that are not so enjoyable for us Thus a multidisciplinary approach is needed to challenge these topics **EMRS PGT : Common For All**

Reid's overall work In addition this volume continues the attractive combination of manuscript material and published work in this case Reid's important and well known essay on Aristotle's logic This text was corrupted in earlier editions of Reid's works and is now restored to the state in which Reid left it This volume underscores Reid's great and growing significance viewed both as a historical figure and as a philosopher At the same time it is of great interdisciplinary importance While the material emerges directly from the core of Reid's philosophy as now understood it will appeal widely to people in literary cultural historical and communications studies In this regard the present volume is a true fruit of the Scottish Enlightenment
