Lab Introduction to 3D printing: 3D modeling, slicing & g-code.

Notes:

During this session, we will mainly work on the computer to prepare models for 3D printing. It would be great if each group could bring at least one additional laptop with the following software installed.

Some questions/research can be done before coming to the lab.

3D modeling software: FreeCAD, link: <https://www.freecad.org>

Slicing software: Ultimaker Cura, link: <https://ultimaker.com/software/ultimaker-cura/>

We will use the profile AnyCubic Kobra.

Take time to watch all the videos presented in this sheet.

Introduction

The development of 3D printing technology enables the fast prototyping of complex models. It revolutionized the industry by enabling a new way to produce complex shapes. Various types of printers exist (resin, extrusion, and powder-binding), but today, we will only focus on extrusion-based 3D printing technology.

The most known application of 3D printing is a home 3D printer such as the one we will use in this lab. It enables the creation of small objects made of various plastic materials.

Climate and Carbon outlines the global challenge of decreasing greenhouse gas emissions. It covers the changing concentration of atmospheric carbon dioxide through time and its causes before considering the promise and the limitations of a wide range of energy technologies for decreasing carbon dioxide emissions. Despite the need to decrease carbon dioxide, the fact is that the global use of fossil fuels is increasing and is likely to continue to do so for some decades to come. With this in mind, the book considers in detail what for many people is the unfamiliar clean energy technology of carbon capture and storage (CCS). How can we capture carbon dioxide from flue gases? How do we transport it? How do we store it in suitable rocks? What are suitable rocks and where do we find them? How do we know the carbon dioxide will remain trapped once it is injected underground? What does CCS cost and how do those costs compare with other technology options? The book also explores the political environment in which the discussion on clean energy technology options is occurring. What will a price on carbon do for technology uptake and what are the prospects of cutting our emissions by 2020 and of making even deeper cuts by 2050? What will the technology mix look like by that time? For people who are concerned about climate change or who want to learn more about clean energy technologies including CCS, this is the definitive view of the opportunities and the challenges we face in decreasing emissions despite a seemingly inexorable global increase in energy demand.
