Group Actions in Ergodic Theory, Geometry, and Topology Robert J. Zimmer, 2019-12-23 Robert J Zimmer is best known in mathematics for the highly influential conjectures and program that bear his name Group Actions in Ergodic Theory Geometry and Topology Selected Papers brings together some of the most significant writings by Zimmer which lay out his program and contextualize his work over the course of his career Zimmer's body of work is remarkable in that it involves methods from a variety of mathematical disciplines such as Lie theory differential geometry ergodic theory and dynamical systems arithmetic groups and topology and at the same time offers a unifying perspective After arriving at the University of Chicago in 1977 Zimmer extended his earlier research on ergodic group actions to prove his cocycle superrigidity theorem which proved to be a pivotal point in articulating and developing his program Zimmer's ideas opened the door to many others and they continue to be actively employed in many domains related to group actions in ergodic theory geometry and topology In addition to the selected papers themselves this volume opens with a foreword by David Fisher Alexander Lubotzky and Gregory Margulis as well as a substantial introductory essay by Zimmer recounting the course of his career in mathematics The volume closes with an afterword by Fisher on the most recent developments around the Zimmer program *The Linguistic Challenge of the Transition to Secondary School* Alice Deignan, Duygu Candarli, Florence Oxley, 2022-12-30 This book provides a unique analysis and description of the linguistic challenges faced by school students as they move from primary to secondary school a major transition which some students struggle with emotionally and academically The study draws on a bespoke corpus of 2.5 million words of written materials and transcribed classroom recordings provided by the project's partner schools combines quantitative and qualitative approaches to the corpus data to explore linguistic variation across school levels registers and subjects describes the procedures of corpus compilation and analysis of written and spoken academic language showing how modern corpus tools can be applied to this far reaching social and educational issue uncovers differences and similarities between the academic language that school children are exposed to at primary and secondary school contrasting this against the backdrop of the non academic language that they encounter outside school This book is important reading for advanced students and researchers in corpus linguistics applied linguistics and teacher education It carries implications for policymakers and schools looking to support students at this critical point in their schooling The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license [Impact Assessment of Stem Initiatives in Improving Educational Outcomes](#) Pallavi Amitava Banerjee, 2017-08-09 Impact assessment of STEM initiatives in improving educational outcomes explores research evidence and labour market reports to show why successive governments think STEM education matters It maps the policy background and the STEM crisis in the UK which led to the launch of the STEM informal education sector These schemes funded by the government educational charities and private organisations

have now mushroomed at the local and national level In the midst of so many activities for various age groups do we know what works or works better for specific group of students Does one size fit all The book provides a detailed report of a longitudinal national evaluation conducted in the UK by making use of official datasets The activities evaluated here have not had a major influence on educational outcomes such as improved standardized national test results or increased STEM subject choices The robust evaluation protocol described in this well structured and thoughtful text will help schools to decide what works best for the students activity providers to evaluate long term outcomes for the activities they run researchers to replicate the protocol for similar activities in other settings Masters and PhD students understand how evidence from research can be used to inform policy and practice The results and implications combined with the recommendations made here will interest all those who are directly involved in the delivery of these enrichment and enhancement activities practitioners using evidence policy makers the research community and schools wanting to run their own evaluations

Debates in Science Education Justin Dillon, Mike Watts, 2022-11-23 This fully revised second edition of Debates in Science Education explores the major issues that science teachers encounter in teaching their subject encouraging the reader to make their own informed judgements and argue their point of view with deeper theoretical knowledge and understanding Brand new chapters written by a team of international experts provide fresh insight into topics of central importance when teaching science Written to aid and inspire beginning teachers current teachers and established subject leaders these focused chapters are essential to anyone wishing to deepen their understanding of salient issues within school science education including STEAM education sustainability and climate change science and sensitive issues equity and diversity science and sex education science and religion science and pedagogy including science inquiry transition from primary to secondary school Encouraging critical reflection and aiming to stimulate both novice and experienced teachers this book is a valuable resource for any student or practicing teacher and particularly those engaged in continuing professional development or Master s level study

Teaching STEM in the Secondary School Frank Banks, David Barlex, 2020-12-29 This book looks at the purpose and pedagogy of STEM teaching and explores the ways in which STEM subjects can interact in the curriculum to enhance student understanding achievement and motivation By reaching outside their own classroom teachers can collaborate across STEM subjects to enrich learning and help students relate school science technology and maths to the wider world Packed with ideas and practical details for teachers of STEM subjects the new revised edition of this book considers what the STEM subjects contribute separately to the curriculum and how they relate to each other in the wider education of secondary school students describes and evaluates different curriculum models for STEM suggests ways in which a critical approach to the pedagogy of the classroom laboratory and workshop can support and encourage all pupils to engage fully in STEM addresses the practicalities of introducing organising and sustaining STEM related activities in the secondary school looks to ways schools can manage and sustain STEM approaches in the long term

This new revised edition is essential reading for trainee and practising teachers those engaged in further professional development and all who wish to make the learning of science technology engineering and mathematics an interesting motivating and exciting experience for their students **The Times Index** ,2007 Indexes the Times and its supplements
