THEORY OF OPERATION

Function

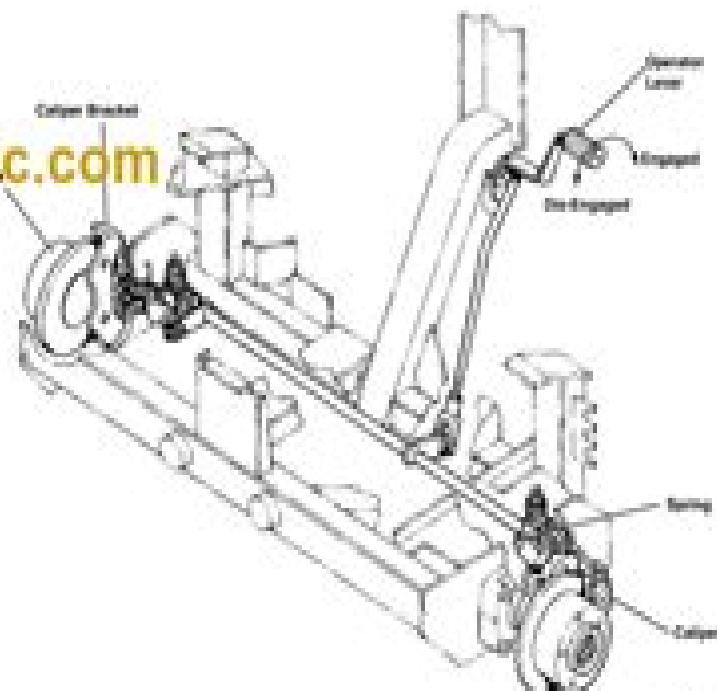

The parking/brake is used to prevent movement when the mower is not in use. The brake is not intended for use in controlling speed or stopping the mower while it is in motion. Primary braking is accomplished by the back pressure in the Hydrostatic Transmission.

Brake interlock switch will stop the engine if operator attempts to move the unit with the brake engaged or leaves the seat without engaging the brake.

Theory

When the brake lever is pulled towards the operator the link rod rotates the push rod which in turn actuates the caliper link which causes the brake caliper to force the brake pads against the brake disc. This prevents the unit from moving. Operating the brake lever also operates the brake interlock switch which will stop the engine under certain circumstances.

The brake is automatically locked on by moving the park brake lever fully to the operator in its slot. It is unlocked by pushing the lever in the top of the slot. When the park brake lever is engaged the linkers will remain engaged until the lever is disengaged.
