Manual Of The Personality Deviance Scale:

Personality Deviance Scale (manual) Alan Bedford, G. A. Foulds, 1978 Handbook of Psychological Testing Paul Kline, 2013-11-12 Since publication in its first edition the Handbook of Psychological Testing has become the standard text for organisational and educational psychologists. It offers the only comprehensive modern and clear account of the whole of the field of psychometrics. It covers psychometric theory, the different kinds of psychological test, applied psychological testing and the evaluation of the best published psychological tests. It is outstanding for its detailed and complete coverage of the field, its clarity even for the non-mathematical, and its emphasis on the practical application of psychometric theory in psychology and education as well as in vocational, occupational and clinical fields. For this second edition the Handbook has been extensively revised and updated to include the latest research and thinking in the field. Unlike other work in this area it challenges the scientific rigour of conventional psychometrics and identifies groundbreaking new ways forward.

Breakdown in Human Adaptation to 'Stress' Volume II J. Cullen, 2012-12-06 The widespread interest in stressful aspects of contemporary society which contribute to its burden of illness and diseases e.g. gastro-intestinal, cardiovascular has led to a large number of statements and reports which relate the manifestations to a maladaptation of the individual. Furthermore, recent research suggests that under some conditions stress may have a more generalized effect of decreasing the body's ability to combat destructive forces and expose it to a variety of diseases. Breakdown in adaptation occurs when an individual cannot cope with demands inherent in his environment. These may be due to an excessive mental or physical load including factors of a social or psychological nature and task performance requirements ranging from those which are monotonous, simple and repetitive to complex, fast decision-taking ones. Experience shows, however, that not all people placed under the same conditions suffer similarly and it follows that to the social and psychological environment should be added a genetic factor influencing through the brain the responses of individuals. It is clear that besides human suffering this breakdown in adaptation causes massive losses of revenue to industry and national health authorities. Thus a reduction in stress before breakdown occurs or an improvement in coping with it would be very valuable. *The ...
