Mathematics and Science Achievement of U. S. Fourth- and Eighth-Grade Students in an International Context Patrick Gonzales, 2010-02 The 2007 Trends in International Math and Science Study TIMSS is the 4th administration since 1995 of this international comparison. It is used to measure over time the math and science knowledge and skills of 4th and 8th graders. TIMSS is designed to align broadly with math and science curricula in the participating countries. This report focuses on the performance of U.S. students relative to that of their peers in other countries in 2007 and on changes in math and science achievement since 1995. Thirty-six countries or educational jurisdictions participated at grade 4 in 2007 while 48 participated at grade 8. This report also describes additional details about the achievement of U.S. student sub populations. Extensive charts, tables, and graphs.

Contributing Factors to TIMSS 2011 Eighth Graders' Science Achievement: A Comparison between Malaysia and Singapore Lay Yoon Fah, Ng Khar Thoe, Suma Parahakaran, 2020-05-03 Trends in International Mathematics and Science Study TIMSS is one of the projects of the International Association for the Evaluation of Educational Achievement (IEA) located at Amsterdam, The Netherlands and Hamburg, Germany. IEA is an independent cooperative of national educational research institutions and governmental research agencies dedicated to improving education. TIMSS is conducted regularly for every four years to assess students' achievement in science and mathematics at both the fourth and eighth grades. The project is dedicated to providing participating countries with information to improve teaching and learning in science and mathematics. This book is written especially for the interest of undergraduate students, postgraduate students, and educators of science education who wish to know more about the contributing factors to Grade 8 students' science achievement in TIMSS. This book is also resourceful for individuals who are involved directly or indirectly in the administration and implementation of TIMSS at the national, state, district, and school levels. This book consists of seven chapters. The first chapter gives a brief introduction to TIMSS which includes the TIMSS curriculum model and TIMSS science assessment frameworks. The subsequent chapters compare the contribution of various factors, i.e., home environment, support, school resources, school climate, teacher preparation, and classroom instructions on Malaysian and Singaporean Grade 8 students' science achievement in TIMSS 2011. Last but not least, recommendations on ways to improve Malaysian Grade 8 students' science achievement in the forthcoming TIMSS are suggested based on the experiences of the Singaporean education system.

independent visual system that provides robust target motion detection First the way sensors obtain images in terms of resolution distribution and pixel neighbourhood is studied This allows a spatial analysis of motion to be carried out Then a novel background maintenance approach for robust target motion detection is implemented Two different situations are considered a fixed camera observing a constant background where objects are moving and a still camera observing objects in movement within a dynamic background This distinction lies on developing a surveillance mechanism without the constraint of observing a scene free of foreground elements for several seconds when a reliable initial background model is obtained as that situation cannot be guaranteed when a robotic system works in an unknown environment Other problems are also addressed to successfully deal with changes in illumination and the distinction between foreground and background elements
