**Agrometeorology** J. Seemann,Y. I. Chirkov,J. Lomas,B. Primault,2012-12-06 Agrometeorology is a comparatively young science The beginnings of agrometeorological work came in the 20 s of this century when agrometeorology was a working branch of climatology In the years following 1950 it then developed widely to an independent science In this process agrometeorology has not only gained a vast knowledge of the influence of meteorological conditions on plants and livestock in agriculture and damage prevention but additionally evolved new advisory methods which are of great practical use in agriculture Up to the present time there has been practically no specific training for an agrometeorologist Agrometeorologists are drawn according to their training from the ranks of general meteorology or from agriculture and its related biological disciplines They must therefore themselves gather the knowledge for their agrometeorological work and combine for themselves the complex of agrometeorology from biological and meteorological information This is usually far from easy as the relevant literature is scattered among the most widely differing journals partly in little known foreign languages and is thus very difficult of access Comprehensive writings are to be found only in very few partial fields of agrometeorology The subject of training problems has thus been treated as of utmost importance at the meetings of the Commission for Agrometeorology CAgM of the World Meteorological Organization WMO especially as agrometeorology has won such great significance and usefulness not only in the so called underdeveloped countries in advancing a more productive agriculture but also in countries whose agricultural standard is already high **Mausam** ,2009 **Journal of Ecobiology** ,2003

practice of merging the science of meteorology with the service of agriculture Written in a concise straightforward style the book presents examples of clinical applications methods techniques models and services in varying climates and agricultural systems documenting up to date research literature from around the world Its systematic approach different from most books on the subject makes it an essential tool for teaching planning and practical use by working farmers as it examines topics such as solar radiation effective rain drought monitoring evapotranspiration and remote sensing Agrometeorology Principles and Applications of Climate Studies in Agriculture examines the developing discipline that international agencies such as the World Meteorological Organization WMO and the Food and Agriculture Organization FAO have declared to be an important growth area in university education A panel of academics researchers and practitioners explore the role of agrometeorology in optimum crop growth from the interactions between meteorological and hydrological factors and agriculture including horticulture animal husbandry and forestry The book addresses pressing topics of agriculture resource utilization and management such as regional and land use planning soil and water conservation frost growing degree day risk analysis of climate hazards animal parasites harvest forecasts crop models decision support systems DSS agroclimatological forecast and the ecological and economic implications of climate change Agrometeorology Principles and Applications of Climate Studies in Agriculture also addresses managing farm water resources environmental temperature planning for frost mitigation photosynthetically active radiation PAR thermoperiodism managing the extremes droughts and floods using computers to manage agricultural systems and much more The interdisciplinary focus and reader friendly style of Agrometeorology Principles and Applications of Climate Studies in Agriculture make the book invaluable to scientists planners and academics working in the major agricultural sciences geography natural resource studies and meteorology
