of the 2003 Mathematics Assessment of the National Assessment of Educational Progress Peter Kloosterman, Frank K.
 Lester,2007 With the enactment of No Child Left Behind and its sanctions for schools that fail to make adequate yearly
 progress NAEP National Assessment of Educational Progress results are no longer afterthoughts Instead the results generate
 headlines and are at the forefront of discussion of what is working in schools and what needs to be changed As the scrutiny
 of NAEP results has increased the National Center for Education Statistics has provided more detailed reporting of the
 results and has increased the level of security of the assessment items Both the level of detail and the concern for item
 security have played prominent roles in the development of this book The foregoing changes make understanding NAEP and
 its consequences crucial for any educator This book provides a background on NAEP looks at 2003 mathematics achievement
 in different content areas discusses data on who is teaching mathematics in the United States and examines students
 perception of mathematics Additionally the book deals with results from NAEP broken down by race ethnicity and by gender
 analyses certain NAEP results with a focus on what is actually measured by those results and examines changes in NAEP

 John O'Neill,1991 For the Enlightenment science represented an ideal of rational argument behaviour and community
 against which could be judged the arbitrary power and authority of other spheres of human practice This Enlightenment
 ideal runs through much liberal and socialist theory However the Enlightenment picture of science has appeared to many to
 be increasingly unconvincing What explains the apparent decline of the Enlightenment vision This book explores one
 neglected answer originally proposed by Husserl that its decline is rooted in formalism in the view that all there is to
 theoretical science is the construction and mastery of formal systems O'Neill demonstrates formalist accounts of
 mathematics and natural science to be inadequate and then considers and rejects Husserl's views on the origin of the
 formalization of the sciences The book concludes by arguing that the rise of a formalist view of the sciences is founded in the
 professionalization of modern science and discusses the significance of this professionalization for the fate of the

Enlightenment view of science Worlds Without Content Against Formalism tackles an important set of issues which have been neglected in recent philosophy of science and in so doing highlights themes in Husserl's later works which have been ignored by most commentators It will be of particular interest for philosophers of mathematics science and social theory and for historians of mathematics and philosophy *The Aims of Mathematical Physics* Edward Arthur Milne, 1929
