

## **Mathematical Investigation**

### **INTRODUCTION**

A mathematical investigation begins with a situation which must be understood or a set of data which must be organized and explained in mathematical terms.

Mathematical investigation refers to the sustained exploration of a mathematical situation. It distinguishes itself from problem solving because it is open-ended. Problem solving is a convergent activity. It has definite goal – the solution of the problem. Mathematical investigation on the other hand is more of a divergent activity. It does not end in the solution, rather it branches out after completion of the investigation.

In mathematical investigations, students are expected to pose their own problems after initial exploration of the mathematical situation. The exploration of the situation, the formulation of problems and its solution give opportunity for the development of independent mathematical thinking and in engaging in mathematical processes such as organizing and recording data, pattern searching, conjecturing, inferring, justifying and explaining conjectures and generalizations. It is these thinking processes which enable an individual to learn more mathematics, apply mathematics in other discipline and in everyday situation and to solve mathematical and non-mathematical problems.

Teaching anchored on mathematical investigation allows for students to learn about mathematics, especially the nature of mathematical activity and thinking. It also make them realize that learning mathematics involves intuition, systematic exploration, conjecturing and reasoning, etc. and not about memorizing and following existing procedures.

Although students may do the same mathematical investigation it is not expected that all of them will consider the same problem from a particular starting point. The “open-endedness” of many investigations also means that students may not completely cover the entire situation. However, at least for a student’s own satisfaction, the achievement of some specific results for an investigation is desirable. What is essential is that the student will experience the following mathematical processes which are the emphasis of mathematical investigation:

- systematic exploration of the given situation
- formulating problems and conjectures
- attempting to provide mathematical justifications for the conjectures.

In mathematics investigation, students are given more opportunity to direct their own learning experiences. Note that a problem solving task can be turned into an investigation task by extending the problem, by varying for example one of the conditions.
