## **Jini And Javaspaces Application Development Robert Flenner:**

**Jini and JavaSpaces Application Development** Robert Flenner, 2001 Jini and JavaSpaces Application Development demonstrates real world usage and application of the Jini technology Specifically the book presents and builds on the concept of a virtual development center It will use the concepts of distributed development open source virtual corporations and the borderless world as a backdrop to developing products and services using Jini and JavaSpaces technologies **JBoss**

**Administration and Development** Scott Stark, Marc Fleury, 2002 This is the official guide to JBoss written by the creators and developers of JBoss The accompanying CD provides a complete copy of the JBoss server **Sams Teach Yourself Java**

**2 in 24 Hours** Rogers Cadenhead, 2002 Cadenhead presents a step by step tutorial that teaches someone with no previous programming experience how to create simple Java programs and applets It starts out at a lower level than Sams Teach Yourself Java in 21 Days and takes things at a slower pace focusing on key programming concepts and essential Java basics

Collaborative Networks and Their Breeding Environments Luis M. Camarinha-Matos, Hamideh Afsarmanesh, Angel Ortiz, 2006-03-09 Progress in collaborative networks continues showing a growing number of manifestations and has led to the acceptance of Collaborative Networks CN as a new scientific discipline Contributions to CN coming from multiple reference disciplines has been extensively investigated In fact developments in CN have benefited from contributions of multiple areas namely computer science computer engineering communications and networking management economy social sciences law and ethics etc Furthermore some theories and paradigms defined elsewhere have been suggested by several research groups as promising tools to help define and characterize emerging collaborative organizational forms Although still at the beginning of a long way to go there is a growing awareness in the research and academic world for the need to establish a stronger theoretical foundation for this new discipline and a number of recent works are contributing to this goal From a utilitarian perspective agility has been pointed out as one of the most appealing characteristics of collaborative networks to face the challenges of a fast changing socio economic context However during the last years it became more evident that finding the right partners and establishing the necessary preconditions for starting an effective collaboration process are both costly and time consuming activities and therefore an inhibitor of the aimed agility Among others obstacles include lack of information e g non availability of catalogs with normalized profiles of organizations and lack of preparedness of organizations to join the collaborative process Overcoming the mismatches resulting from the heterogeneity of potential partners e g differences in infrastructures corporate culture methods of work and business practices requires considerable investment Building trust a pre requisite for any effective collaboration is not straight forward and requires time Therefore the effective creation of truly dynamic collaborative networks requires a proper context in which potential members are prepared to rapidly get engaged in collaborative processes The concept of breeding environment has thus emerged as an important facilitator for wider dissemination of collaborative networks and their practical materialization The PRO VE 05

held in Valencia Spain continues the 6th event in a series of successful working conferences on virtual enterprises This book includes selected papers from that conference and should become a valuable tool to all of those interested in the advances and challenges of collaborative networks     Sams Teach Yourself J2EE in 21 Days Martin Bond,2002 Sams Teach Yourself

J2EE in 21 Days introduces the Java 2 Enterprise Edition to Java programmers in 21 straightforward example driven lessons     Aspect-oriented Programming with AspectJ Ivan Kiselev,2003 In a November 2001 Java Pro magazine article noted Java pundit Daniel Savarese states The days of Object Oriented Programming may be numbered One day we may all be using Aspect Oriented Programming While this may be hyperbole the AOP bring certain needed improvements to the OOP AspectJ is a Java based tool that allows developers to apply standard Java syntax to AOP principles much as C allowed C programmers to use C syntax in an object oriented manner There are AspectJ add ons available for Borland s JBuilder Sun s Forte for Java and for the EMACS text editor Aspect Oriented Programming with AspectJ introduces AOP and the AspectJ tool The book also shows how by using existing Java programming knowledge the developer can use AOP in meaningful development work     **Java P2P Unleashed** Robert Flenner,2003 Java P2P Unleashed provides a single source for Java

developers who want to develop P2P systems The book explains the benefits of each technology and shows how to fit the P2P pieces together both in building new systems and integrating with existing ones starts with a discussion of the P2P architecture referencing similarities with existing familiar systems while previewing several types of P2P applications It explains how to plan ahead for security routing performance and other issues when developing a P2P application Each technology included in the book JXTA Jini JavaSpaces J2EE Web services is approached from a P2P perspective focusing on implementation concerns Java developers will face while using them The last section includes several large scale examples of different P2P applications managing content building communities integrating services routing messages and using intelligent agents to gather information The final chapter looks ahead to future developments in Java P2P technologies
