Handbook of Biodegradable Polymers Catia

Bastioli,2020-03-09 This handbook covers characteristics processability and application areas of biodegradable polymers with key polymer family groups discussed It explores the role of biodegradable polymers in different waste management practices including anaerobic digestion and considers topics such as the different types of biorefineries for renewable monomers used in producing the building blocks for biodegradable polymers *Advances in Biodegradable Polymers* G. F. Moore,S. M. Saunders,1998-02 In this report the factors which influence biodegradation are first explained Methods of testing and evaluating biodegradation are then described and compared The principles relative costs and practical applications of specific tests are outlined together with the position with respect to recognised standards The range of biodegradable polymers and polymer blends is then described including natural and synthetic products An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database provides useful references for further reading

Starch-Based Polymeric Materials and Nanocomposites Jasim Ahmed,Brijesh K. Tiwari,Syed H. Imam,M.A. Rao,2012-04-04 In recent years much attention has been focused on biodegradable polymers from renewable resources Due to its availability and low cost starch is a promising candidate among biopolymers for use in biodegradable packaging materials and for other purposes Starch Based Polymeric Materials and Nanocomposites Chemistry Processing and Applications presents the latest developments in starch chemistry rheology starch derivatives starch based nanocomposites and their applications Topics discussed include The chemistry microstructure processing and enzymatic degradation of starch The importance and role of starch as a gelling agent Plasticization and the role of plasticizers Various rheological techniques applied to starch related products and the characteristics of starch dispersions Polymeric aspects of reactive extrusion REX and its use on starch and other biopolymers Cyclodextrins CDs and their industrial applications and CD based supramole and polymers The potential of starch in food packaging edible packaging feedstock for bioproducts and industrial and consumer products The theoretical basis and derivation of the mathematical model for multicomponent systems and its solution algorithm The book also explores recent progress in biodegradable starch based hybrids and nanomaterials and the incorporation of nanoparticles in starches to enhance their mechanical and thermal properties The book concludes by discussing the use of biopolymeric nanoparticles BNPs in drug delivery and life cycle assessment LCA of starch based polymeric materials for packaging and allied applications With contributions from leading experts in academia and industry this volume demonstrates the versatility of starch and its potential in a variety of applications
