Final Report* N. B. Johnson, 1977 Western Aerospace ,1959 **Closed-field Capacitive Liquid Level Sensor** ,1998 A liquid level sensor based on a closed field circuit comprises a ring oscillator using a symmetrical array of plate units that creates a displacement current The displacement current varies as a function of the

proximity of a liquid to the plate units The ring oscillator circuit produces an output signal with a frequency inversely proportional to the presence of a liquid A continuous liquid level sensing device and a two point sensing device are both proposed sensing arrangements A second set of plates may be located inside of the probe housing relative to the sensing plate units The second set of plates prevent any interference between the sensing plate units
