Rottman,2011-12-20 The M16 was first introduced in 1958 and was revolutionary for its time as it was made of lightweight materials including special aluminum and plastics It was first adopted by US Special Forces and airborne troops in 1962 before it was issued to Army and Marine units serving in Vietnam Its use spread throughout the following decades and a number of variants including submachine and carbine versions were also fielded As a result it is now amongst the three most used combat

cartridges in the world while over 10 million M16s and variants have been produced making it one of the most successful American handheld weapons in history But despite its undeniable success the M16 is not without its detractors Indeed the black rifle as it is known is one of the most controversial rifles ever introduced with a long history of design defects ruggedness issues cleaning difficulties and reliability problems leading to endless technical refinements This volume provides a technical history of the M16 and the struggle to perfect it together with an assessment of its impact on the battlefield drawing on over a decade s combat experience with the rifle

Marksmanship, McNamara, and the M16 Rifle Thomas L. McNaugher,Rand Corporation,1979 Those who manage the weapons acquisition process are often frustrated by barriers to change posed by

military services which generally prefer buying weapons that perform traditional missions in traditional ways This essay explores the way in which large organizations adapt to innovation by focusing on the U S Army s purchase of the M16 rifle Because the M16 represented a break with the Army s rifle tradition the service resisted Defense Secretary Robert McNamara s efforts to introduce it in 1962 Yet by 1966 the Army standardized the piece replacing the very traditional M14 rifle in the process The essay concludes that this adaptation is best explained by the existence of a declining Army wide consensus concerning the Army s rifle tradition Although policy remained traditional many in the service were unhappy with the M14 McNamara s initial efforts and the M16 s performance in Vietnam convinced others of the rifle s utility and this freed the organization from its attachment to tradition Rifle Marksmanship U. S. Army,2014-12-01 Drill sergeants are the primary trainers of rifle marksmanship in Initial Entry Training IET They are responsible for teaching basic and advanced rifle marksmanship BRM and ARM to all enlisted Soldiers using a crawl walk run training strategy The current BRM training strategy encompasses instruction on the fundamentals of marksmanship grouping and zeroing an M16 M4 series rifle and transitional firing that culminates with a qualification event The ARM training strategy focuses on engaging targets from advanced firing positions in increasingly difficult scenarios and conditions From 2006 to 2010 the Initial Entry Training IET rifle marksmanship program went through numerous changes designed to better prepare the IET Soldier for deployment to Afghanistan or Iraq These changes redefined parts of the Army s marksmanship doctrine and required drill sergeants to relearn techniques and procedures required to implement the new training strategies It was determined there was a need to generate a rifle marksmanship diagnostic and training guide that consolidated the tacit knowledge regarding the techniques that experienced drill sergeants and other expert marksmanship trainers had found to be effective with IET Soldiers These techniques would provide valuable training supplements to the marksmanship field manual *The Official US Army Rifle and Carbine Handbook - Updated: a Marksmanship Guide for M4 and M16 Series Weapons* U.
