Clipped Wings Deborah Ancell, 2016-10-04 Within the developed world airlines have responded to the advice of advocates for corporate social and environmental responsibility CSER to use the intertwined dimensions of economics society and environment to guide their business activities However disingenuously the advocates and regulators frequently pay insufficient attention to the economics which are critical to airlines sustainability and profits This omission pushes airlines into the unprofitable domain of CSERplus The author identifies alleged market inefficiencies and failures examines CSERplus impacts on international competition and assesses the unintended consequences of the regulations She also provides innovative ideas for future proofing airlines *Clipped Wings* is a treatise for business professionals featuring academic research as well as industry anecdotes It is written for airlines including their owners employees passengers and suppliers airports trade associations policy makers educators students consultants CSERplus specialists and anyone who is concerned about the future of competitive airlines

International Communities of Invention and Innovation Arthur Tatnall, Christopher Leslie, 2016-11-30 This book contains revised selected papers presented at the IFIP WG 9.7 International Conference on the History of Computing HC 2016 held in Brooklyn NY USA in May 2016 The 13 full papers included in this volume were carefully reviewed and selected from numerous submissions The papers cover a wide range of topics related to the history of computing and focus on the history of pre-existing relationships and communities that led to triumphs and dead ends in the history of computing This broad perspective helps to tell a more accurate story of important developments like the Internet and provide a better understanding of how to sponsor future invention and innovation They reflect on histories that foreground the international community along four broad themes invention policy infrastructure and social history

Wireless Power Transfer Johnson I. Agbinya, 2022-09-01 *Wireless Power Transfer* is the second edition of a well received first book which published in 2012 It represents the state of the art at the time of writing and addresses a unique subject of great international interest in terms of research Most of the chapters are contributed by the main author though as in the first edition several chapters are contributed by other authors The authors of the various chapters are experts in their own right on the specific topics within wireless energy transfer Compared to the first edition this new edition is more comprehensive in terms of the concepts discussed and the range of current industrial applications which are presented such as those of magnetic induction From the eleven chapters of the first edition this second edition has expanded to twenty chapters More chapters on the theoretical foundations and applications have been included This new edition also contains chapters which deal with techniques for reducing power losses in wireless power transfer systems In this regard specific chapters discuss impedance matching methods frequency splitting and how to deploy systems based on frequency splitting A new chapter on multi dimensional wireless power transfer has also been added The design of wireless power transfer systems based on bandpass filtering approach has been included in addition to the two techniques using couple mode theory

and electronic circuits The book has retained chapters on how to increase efficiency of power conversion and induction and also how to control the power systems Furthermore detailed techniques for power relay including applications which were also discussed in the first edition have been updated and kept The book is written in a progressive manner with a knowledge of the first chapters making it easier to understand the later chapters Most of the underlying theories covered in the book are clearly relevant to inductive near field communications robotic control robotic propulsion techniques induction heating and cooking and a range of mechatronic systems

Silicon Photonics for High-Performance Computing and Beyond

Mahdi Nikdast, Sudeep Pasricha, Gabriela Nicolescu, Ashkan Seyedi, Di Liang, 2021-11-16 Silicon photonics is beginning to play an important role in driving innovations in communication and computation for an increasing number of applications from health care and biomedical sensors to autonomous driving datacenter networking and security In recent years there has been a significant amount of effort in industry and academia to innovate design develop analyze optimize and fabricate systems employing silicon photonics shaping the future of not only Datacom and telecom technology but also high performance computing and emerging computing paradigms such as optical computing and artificial intelligence Different from existing books in this area Silicon Photonics for High Performance Computing and Beyond presents a comprehensive overview of the current state of the art technology and research achievements in applying silicon photonics for communication and computation It focuses on various design development and integration challenges reviews the latest advances spanning materials devices circuits systems and applications Technical topics discussed in the book include Requirements and the latest advances in high performance computing systems Device and system level challenges and latest improvements to deploy silicon photonics in computing systems Novel design solutions and design automation techniques for silicon photonic integrated circuits Novel materials devices and photonic integrated circuits on silicon Emerging computing technologies and applications based on silicon photonics Silicon Photonics for High Performance Computing and Beyond presents a compilation of 19 outstanding contributions from academic and industry pioneers in the field The selected contributions present insightful discussions and innovative approaches to understand current and future bottlenecks in high performance computing systems and traditional computing platforms and the promise of silicon photonics to address those challenges It is ideal for researchers and engineers working in the photonics electrical and computer engineering industries as well as academic researchers and graduate students M S and Ph D in computer science and engineering electronic and electrical engineering applied physics photonics and optics

100 Years of ›Tractatus Logico-Philosophicus‹ – 70 Years after

Wittgenstein's Death Esther Heinrich-Ramharter, Alois Pichler, Friedrich Stadler, 2025-04-21 This volume covers the origin interpretations and reception of Wittgenstein's Tractatus Logico Philosophicus and offers a critical assessment of the related research and contemporary historiography The authors deal with an evaluation of research on Wittgenstein's philosophy life and work as well as of the editions of his work published since his death This includes upcoming editions with a special focus

on the availability of Wittgenstein's digital Nachlass Special attention is given to the reception of and references to the Tractatus in the middle and later Wittgenstein as well as the reception by other philosophers Moreover open philosophical ethical and unresolved scientific questions are addressed with a critical investigation of current research Furthermore the complex diverse and mutual relation of Wittgenstein and the Vienna Circle of Moritz Schlick Otto Neurath Friedrich Waismann and others are addressed

New Frontiers in Multiscale Modelling of Advanced Materials Simone Taioli, Maurizio Dapor, Nicola M. Pugno, 2016-01-22 Atomistic simulations based on ab initio and semi empirical approaches are nowadays widespread in many areas of physics chemistry and more recently biology Improved algorithms and increased computational power widened the areas of application of these computational methods to extended materials of technological interest in particular allowing unprecedented access to the first principles investigation of their electronic optical thermodynamical and mechanical properties even where experiments are not available However for a big impact on the society this rapidly growing field of computational approaches to materials science has to face the unfavourable scaling with the system size and to beat the time scale bottleneck Indeed many phenomena such as crystal growth or protein folding for example occur in a space time scale which is normally out of reach of present simulations Multi scale approaches try to combine different scale algorithms along with matching procedures in order to bridge the gap between first principles and continuum level simulations This Research Topic aims at the description of recent advances and applications in these two emerging fields of ab initio and multi scale materials modelling for both ground and excited states A variety of theoretical and computational techniques are included along with the application of these methods to systems at increasing level of complexity from nano to micro Crossing the borders between several computational theoretical and experimental techniques this Research Topic aims to be of interest to a broad community including experimental and theoretical physicists chemists and engineers interested in materials research in a broad sense
