The fundamental operations on the abstract set type are:

{
    public HashSet(int size, float capacity) {
        size = size;
        capacity = capacity;
    }
    public boolean contains(E element) { return true; }
    public boolean isEmpty() { return false; }
    public int size() { return 0; }
    public void add(E element) { }
    public void remove(E element) { }
