cases from Monserrat Cambodia Philippines and elsewhere The contributors collectively argue that the processes for making and implementing decisions play a large part in determining whether outcomes are socially just and examine various value systems and strategies adopted by individuals versus authorities Considering perceptions of risk the volume offers a unique way to think about economic assessments in the context of resettlement and draws parallels between different country contexts to compare fully urbanised areas with those experiencing urban growth It also provides an opportunity to re think how disaster risk management can better address the accumulation of urban risks through urban planning
