Advances in Systems, Computing Sciences and Software Engineering Tarek Sobh, Khaled Elleithy, 2006-08-15 The conference proceedings of the International Conference on Systems Computing Sciences and Software Engineering include a set of rigorously reviewed world class manuscripts addressing and detailing state of the art research projects in the areas of Computer Science Software Engineering Computer Engineering and Systems Engineering and Sciences The International Conference on Systems Computing Sciences and Software Engineering SCSS 2005 was part of the International Joint Conferences on Computer Information and Systems Sciences and Engineering CISSE 2005 CISSE 2005 the World's first Engineering Computing and Systems Research Conference was the first high caliber Research Conference in the world to be completely conducted online in real time via the internet CISSE received 255 research paper submissions and the final program included 140 accepted papers from more than 45 countries The whole concept and format of CISSE 2005 was very exciting and ground breaking The powerpoint presentations final paper manuscripts and time schedule for live presentations over the web had been available for 3 weeks prior to the start of the conference for all registrants so they could pick and choose the presentations they want to attend and think about questions that they might want to ask The live audio presentations were also recorded and are part of the permanent CISSE archive which includes all power point presentations papers and recorded presentations All aspects of the conference were managed online not only the reviewing submissions

and registration processes but also the actual conference. Conference participants, authors, presenters, and attendees only needed an internet connection and sound available on their computers in order to be able to contribute and participate in this international ground-breaking conference. The on-line structure of this high-quality event allowed academic professionals and industry participants to contribute work and attend world-class technical presentations based on rigorously refereed submissions without the need for investing significant travel funds or time out of the office. Suffice to say that CISSE received submissions from more than 50 countries for whose researchers this opportunity presented a much more affordable dynamic and well-planned event to attend and submit their work to versus a classic on-the-ground conference. The CISSE conference audio room provided superb audio even over low-speed internet connections, the ability to display PowerPoint presentations, and cross-platform compatibility: the conferencing software runs on Windows, Mac, and any other operating system that supports Java. In addition, the conferencing system allowed for an unlimited number of participants, which in turn granted CISSE the opportunity to allow all participants to attend all presentations as opposed to limiting the number of available seats for each session. The implemented conferencing technology, starting with the submission review system and ending with the online conferencing capability, allowed CISSE to conduct a very high-quality fulfilling event for all participants.

Volume 3 is exclusively focused on the new approaches on thematic cartography offered by the three successive revolutions affecting the discipline: digital multimedia and the Internet.

Docker Containers Christopher Negus, 2015-11-26. The Practical Guide to Running Docker on Linux Systems or Cloud Environments. Whether on your laptop or a remote cloud, Docker can transform how you create, test, deploy, and manage your most critical applications. In *Docker Containers*, Christopher Negus helps you master Docker containerization from the ground up. You'll start out running a few Docker container images in Ubuntu, Fedora, RHEL, CoreOS, or Project Atomic. By the time you've finished, you'll be deploying enterprise-quality multi-container Kubernetes setups in modern Linux and cloud environments. Writing for system administrators, software developers, and technology enthusiasts, Negus touches on every aspect of working with Docker: setting up containerized applications, working with both individual and multiple containers, running containers in cloud environments, and developing containers. Teaching through realistic examples of desktop applications, system services, and games, Negus guides you through building and deploying your own Dockerized applications. As you build your expertise, you'll also learn indispensable Docker best practices for building and integrating containers, managing Docker on a day-to-day basis, and much more. Understanding what Docker is and what you can do with it. Installing Docker on standard Linux or specialized container operating systems such as Atomic Host and CoreOS.
