

Tratamiento de Agua Residual por Proceso Químico en Perú

1. Definición y Normativa

El tratamiento de agua residual por proceso químico es un procedimiento destinado a eliminar contaminantes presentes en el agua residual mediante el uso de sustancias químicas. Esta técnica busca mejorar la calidad del agua antes de su vertido en cuerpos receptores o su reutilización en diversos procesos industriales o agrícolas. En el contexto peruano, esta práctica se encuentra regulada por un conjunto de normativas que establecen los lineamientos legales y técnicos para su ejecución. Entre las principales normativas aplicables se encuentran:

- **Ley General de Aguas (Ley N° 29338):** Esta ley, promulgada en el año 2009, establece el marco legal para la gestión integral y sostenible de los recursos hídricos en el territorio peruano. Contiene disposiciones relacionadas con la conservación, protección, uso, aprovechamiento y administración del agua, incluyendo aspectos vinculados al tratamiento de aguas residuales. Ley N° 29338.
- **Reglamento de la Ley de Recursos Hídricos (Decreto Supremo N° 001-2010-AG):** Este reglamento, emitido en el año 2010, complementa y desarrolla las disposiciones de la Ley General de Aguas. En él se establecen las normas y procedimientos para la aplicación de la legislación hídrica, incluyendo aspectos relacionados con la gestión y tratamiento de aguas residuales. Decreto Supremo N° 001-2010-AG.
- **Norma de Calidad Ambiental para Aguas (Decreto Supremo N° 002-2008-MINAM):** Esta norma, emitida por el Ministerio del Ambiente en el año 2008, establece los estándares de calidad del agua en el país. Define los valores máximos permisibles de contaminantes para diferentes usos del agua, incluyendo los destinados al tratamiento de aguas residuales. Decreto Supremo N° 002-2008-MINAM.

Estas normativas proporcionan el marco legal y técnico necesario para regular y supervisar las actividades relacionadas con el tratamiento de aguas residuales por proceso químico en el Perú, garantizando así la protección del medio ambiente y la salud pública.

2. Características

- **Alta eficiencia:** El tratamiento químico puede lograr una alta remoción de contaminantes orgánicos e inorgánicos presentes en el agua residual.
- **Versatilidad:** Es capaz de tratar una amplia gama de contaminantes, adaptándose a las necesidades específicas de cada tipo de efluente.
- **Requiere infraestructura especializada:** El tratamiento químico demanda la instalación de equipos y sistemas de dosificación de productos químicos, así como la construcción de tanques de reacción y sedimentación.
- **Generación de subproductos:** El uso de productos químicos puede generar subproductos que deben ser adecuadamente gestionados para evitar impactos negativos en el medio ambiente.
