

80 divided by 6 is 13.3 or 13 gtts/min. Now to it even simpler, every time you use a 10 gtts/ml regular drip set just divide the amount by 6 since they're six 10 minute time periods in one hour. All you need to do is plug in the amount of fluid per hour.

$$\frac{80}{6} = 13.3 \text{ or } 13 \text{ gtts/min}$$

The two remaining regular drip sets are the 15 gtts/ml set and the 20 gtts/ml set. Remember, all you need to do is figure out how many time periods the drip set has in one hour (don't forget the clock.)

The 15 gtts/ml drip set is related to four 15 minute time periods in one hour which means we divide the amount per hour by 4. 15 goes into 15 once and 15 goes into 60 four times resulting as 80/4 leaving us with the answer of 20. Observe the example below:

$$\frac{80 \text{ ml (amount)} \times 15 \text{ gtts/ml (drip set)}}{60 \text{ (divided my time in minutes – over 1 hour)}} = \frac{80 \times \cancel{15}}{\cancel{60}} \frac{1}{4} = \frac{80 \times 1}{4} = \frac{80}{4} = 20 \text{ gtts/min}$$

So any time you use a 15 gtts/ml drip set just divide the amount of solution per hour by 4.

$$\frac{80}{4} = 20 \text{ gtts/min}$$

The 20 gtts/ml drip set is calculated the same way except you divide by 3 since there are three 20 minute periods in one hour. 20 goes into 20 once and 20 goes into 60 three times. Observe the example below:

$$\frac{80 \text{ ml (amount)} \times 20 \text{ gtts/ml (drip set)}}{60 \text{ (divided my time in minutes – over 1 hour)}} = \frac{80 \times \cancel{20}}{\cancel{60}} \frac{1}{3} = \frac{80 \times 1}{3} = \frac{80}{3} = 26.6$$

The answer is 26.6 or rounded off to 27 gtts/minute.

This means all you need to do is divide the amount of solution per hour by 3 to get the gtts/min.

### Summary

- Drip sets used in medicine are based on the 60 minute clock for timing and calculations. All you need to do is divide the amount to be infused each hour by how many time periods the drip set has in one hour which is based on the clock.
- The drip sets include the minidrip set, 60 gtts/ml, and three regular drip sets which include the 10 gtts/ml set, 15 gtt/ml set, and the 20 gtts/ml set.
- There is one (1) 60 minute period in one hour, six (6) 10 minute periods in one hour, four (4) 15 minute periods in one hour, and three (3) 20 minute periods in one hour.
- When reducing fractions to allow easier calculations remember to divide the same number into both the numerator and the denominator to arrive at the lowest common denominator. Thinking about the problems presented you must divide the same number into the drops per milliliter and the time (in minutes.)

## **Med Math Formulas Paramedic Quiz:**

**Lights and Sirens** Kevin Grange, 2015-06-02 A true account of going through UCLA's famed Daniel Freeman Paramedic Program and practicing emergency medicine on the streets of Los Angeles. Nine months of tying tourniquets and pushing new medications, IVs, chest compressions, and defibrillator shocks that was Kevin Grange's initiation into emergency medicine. When at age thirty-six he enrolled in the Harvard of paramedic schools, UCLA's Daniel Freeman Paramedic Program, long considered one of the best and most intense paramedic training programs in the world. Few jobs can match the stress, trauma, and drama that a paramedic calls a typical day at the office, and few educational settings can match the pressure and competitiveness of paramedic school. Blending months of classroom instruction with ER rotations and a grueling field internship with the Los Angeles Fire Department, UCLA's paramedic program is like a mix of boot camp and med school. It would turn out to be the hardest thing Grange had ever done, but also the most transformational and inspiring. An in-depth look at the trials and tragedies that paramedic students experience daily. **Lights and Sirens** is ultimately about the best part of humanity: people working together to help save a human life.

## **Multidisciplinary Approaches to Theory in Medicine**

Ray Paton, Laura A. McNamara, 2006-01-06 This volume will be a collection of chapters from authors with wide experience in their research field. The purpose is to produce a coherent book that reflects the common theme of theory in medical thinking and multidisciplinary research practice. In this context, theory relates to frameworks of concepts, facts, models, etc. that help to inform practitioners, clinicians, scientists, and engineers both within their own fields and as they seek to share dialogue with colleagues from other fields. **Multidisciplinary Approaches to Theory in Medicine** will therefore be integrative across a broad spectrum of fields within medicine. To achieve this, the chapters will be associated with others in a number of meaningful ways. Each chapter will share a number of points of contact that will include at least two of the following: Similar biomedical area (e.g., immunity, neuroscience, endocrinology, pathology, oncology, haematology). Similar multidisciplinary theoretical contexts (e.g., modelling, analysis, description, visualization, complex systems). Similar multidisciplinary medical issues and questions (e.g., clinical practice, decision making, informatics). Uniquely explores role of interdisciplinary exchange in the development and expansion of medical theory. Timely and insightful essays on the growth and development of medical theories from some of the world's top clinicians and medical researchers, including Werner Arber, Frank Vertosick, and David Weatherall. Assembles diverse perspectives on medicine and physiology from biology, statistics, ethics, computer science, philosophy, history. Uniquely illuminates the social and historical processes through which theoretical research translates into clinical practice. Reveals the growing role of technology, especially computational modelling, in changing the nature of Western medicine.
