To avoid damage to the engine from frost, corrosion and cavitation, it is very important to treat the coolant fluid appropriately and check it. The following mixing ratio is recommended when concentrated coolant and clean water are used.

| Amb. freeze protection to | Proportion of concentrated coolant | Water proportion |
|---------------------------|------------------------------------|------------------|
| -10 °C                    | min. 30%                           | 70%              |

The water quality is very important for the treatment of the coolant and must show the following properties:

| Properties                      | min. | max. |
|---------------------------------|------|------|
| conductivity at 20°C            | ≤ 5  | ≤ 5  |

| Total hardness                  | 3    | 10   |

In the event of deviations of the values, the water must be treated in line with the admissible values. In the case of any uncertainty regarding the water quality, a fully mixed coolant must be used.
