Bactériologie médicale
Vincent Cattoir, François Denis, Christian Martin, Marie-Cécile Ploy, 2016-11-02 Le succès des précédentes éditions et l'évolution de la discipline justifient pleinement cette nouvelle édition entièrement mise à jour. Plus qu'une simple actualisation, il s'agit d'une refonte en profondeur de l'ouvrage prenant en compte les nouvelles avancées de la discipline. L'ouvrage a bénéficié de la contribution spécifique d'une vingtaine de nouveaux auteurs. Chaque domaine est traité par un ou plusieurs microbiologistes ayant une pratique et une expérience directe du champ concerné. Vritable synthèse de la spécialité en même temps qu'ouvrage de référence utilisable au quotidien, ce manuel est organisé en quatre parties : Technologies générales de bactériologie, syndromique des produits pathologiques, Identification et systématique bactérienne, et rôle du laboratoire dans l'instauration et la surveillance d'un traitement antibiotique. Au sein de ces parties, plus de quarante chapitres abordent les germes sous l'angle taxonomique mais aussi dans leur ensemble dans le contexte des produits pathologiques. Les différents problèmes de gestion d'un laboratoire de bactériologie comme l'automatisation, l'accreditation, la sécurité sont également abordés. Les chapitres sont facilement consultables et les informations recherchées sont accessibles par un recours important aux encadrés, aux tableaux ainsi qu'à des schémas et dessins originaux. Cet ouvrage s'attache à présenter aussi bien les démarches diagnostiques historiques pasteurienne que des méthodes de pointe basées sur les approches spectrométriques avec la révolution apportée par le MALDI TOF, génomiques, antigéniques, protéiques seules ou combinées. Il s'adresse aux bactériologistes débutants ou confirmés, tous les biologistes et cliniciens mais également toutes les personnes désireuses de suivre l'évolution de la microbiologie de ces dernières années. Votre manuel tout en couleurs agrémenté de nombreux encadrés, tableaux, schémas et dessins originaux. La technologie générale de bactériologie des produits pathologiques, l'identification et systématique bactérienne, le rôle du laboratoire dans l'instauration et la surveillance d'un traitement antibiotique. Le point sur les techniques actuelles allant de l'approche pasteurienne à la biologie moléculaire, des techniques classiques de base aux automates et à l'informatique.
