Medicinal Plants Study Of Anticancer Properties:

Medicinal Plants Dr Ekta Prakash MS, Ekta Prakash, 2014-12-29 This book deals with the medicinal plants having anticancer properties Those plants which show anti cancer activities are often rich in Phenolic compounds and various alkaloids and anti oxidant compounds In this book there is collection of those medicinal plants which shows anti cancer properties and few are used as established drug The various alkaloid and aromatic compounds responsible for such anti cancer properties are discussed in this preview About 30 plant derived compounds have been isolated so far and are currently under clinical trials This book might be of interest for researchers and Undergraduate and graduate students studying plant science and aromatic medicinal plants for cure of various diseases like cancer It may be helpful for postdoctoral trainees and young scientist researchers This book may be beneficial for various education programs

Harnessing Medicinal Plants in Cancer Prevention and Treatment Roy, Arpita, 2024-03-11 In a world grappling with the relentless impact of cancer claiming nearly 10 million lives in 2020 alone the pursuit of effective prevention and treatment methods is more crucial than ever Harnessing Medicinal Plants in Cancer Prevention and Treatment delves into promising medicinal plants exploring their potential in the prevention and treatment of various types of cancer Acknowledging the limitations and risks associated with synthetic medicines the book emphasizes the significance of traditional medicine revealing that approximately 80% of the global population relies on plant based remedies for primary health care Within these pages readers will find a comprehensive exploration of diverse medicinal plants and their active compounds unraveling their mode of action against cancer The content spans continents from the phytochemical and biological properties of anticancer medicinal plants in India to the role of Chinese and Thai plants in cancer prevention and treatment Each chapter meticulously examines specific plants or compounds such as the renowned Curcuma longa or the intriguing Momordica charantia providing an in depth analysis of their anticancer properties This book elucidates the multifaceted role of plant derived compounds in various cancer types addressing their efficacy and safety profiles The book is rich with insights into the potential of bioactive compounds to serve as lead candidates in drug discovery highlighting the importance of plants in developing effective anticancer agents This book is an invaluable resource for a diverse audience including biotechnologists plant biologists pharmacologists and cancer related researchers Anticancer Plants: Natural Products and Biotechnological Implements Mohd Sayeed Akhtar, Mallappa Kumara Swamy, 2018-07-02 This volume provides summarized scientific evidence of the different classes of plant derived phytocompounds their sources chemical structures anticancer properties mechanisms of action methods of extraction and their applications in cancer therapy It also discusses endophyte derived compounds as chemopreventives to treat various cancer types In addition it provides detailed information on the enhanced production of therapeutically valuable anticancer metabolites using biotechnological interventions such as plant cell and tissue culture approaches including in vitro hairy root and cell suspension culture and metabolic engineering of

biosynthetic pathways Anticancer Plants Natural Products and Biotechnological Implements Volume 2 explores the natural bioactive compounds isolated from plants as well as fungal endophytes their chemistry and preventive effects to reduce the risk of cancer Moreover it highlights the genomics proteomics approaches and biotechnological implementations Providing solutions to deal with the challenges involved in cancer therapy the book benefits a wide range of readers including academics students and industrial experts working in the area of natural products medicinal plant chemistry pharmacology and biotechnology

Ethnomedicinal Plants with Therapeutic Properties V.R. Mohan,A. Doss,P.S. Tresina,2019-02-11 Ethnomedicinal Plants with Therapeutic Properties provides detailed information on locally important medicinal plants discusses the pharmacological properties of selected medicinal plants and looks at the phytodrug aspects of selected plants In 24 important chapters the volume covers ethnomedicine pharmacology and pharmacognosy of selected plants Medicinal plants are an important part of our natural health They serve as important therapeutic agents as well as valuable raw materials for manufacturing numerous traditional and modern medicines The history of medicinal plants used for treating diseases and ailments dates back to the beginning of human civilization Our forefathers were compelled to use any natural substance that they could find to ease their suffering caused by acute and chronic illnesses wounds and injuries and even terminal illness This volume highlights recent scientific evidence of therapeutic properties of traditionally used medicinal plants in relation to clinical outcomes and remedies for promotion of human well being The authors have endeavored to convey the therapeutic knowledge of ethnomedicinal plants clearly and concisely

Identification and Characterization of the Anticancer Potential of Indigenous Medicinal Plants of the Arabian Peninsula Sameera Omar Mohammed Balhamar,2016 Indigenous plant species historically used for their medicinal properties are a tremendous source for bringing newer and safer drugs to the market A concerted effort is needed to characterize their medicinal potential and identify new molecules that could be exploited in modern medicine The current study was undertaken to study the anticancer properties of several indigenous plants that are used by the local population of the Arabian Peninsula and beyond for various medicinal purposes Towards this end we acquired different plant extracts from five plants namely

Boswellia sacra BS Cleome droserifolia CD Terbium muscatensis TM Orchadenus arabicus OA and Acredocarpus orientalis AO that were screened for their anticancer properties and mechanism of action Of these only the essential oil from Boswellia sacra has recently been shown to have anticancer activity Thirty two different organic extracts were obtained from these native plants Essential oil from Boswellia sacra was used as a control as well as to expand upon its anticancer activity profile Initially the essential oil and the extracts were screened for their anti proliferation potential in two different human cancer cell lines MCF 7 and HeLa to ensure that their anticancer potential was not missed The cell proliferation assay MTT 3 4 5 dimethylthiazol 2 yl 2 5 diphenyltetrazolium bromide was used to study the effect of the oil and various extracts on cell viability in a time and dose dependent manner Once all the extracts had been screened select groups of effective extracts were chosen from each plant for a more in depth analysis in a full panel of human breast cancer cell lines comprising of MCF 7 and MDA MB 231 and their normal counterpart MCF 10A as well as the prototypic human cervical cancer cell line HeLa MCF 7 represents a hormone responsive breast cancer cell line while MDA MB 231 represents a non hormone responsive triple receptor negative breast cancer cell line The mechanism of cell death induced by these extracts was explored by testing the activities of various caspase enzymes induced during apoptosis a major pathway of programmed cell death using caspase specific glow assays and western blot analysis Finally a few isolated compounds and their derivatives obtained from these extracts were acquired from our collaborators and tested to determine whether they could demonstrate the anti proliferative effects observed using the crude extracts and if so whether it was due to apoptosis Test of the extracts using these assays revealed that some of the extracts exhibited anti proliferative activity against the targeted cancer cell lines The anti proliferative effects of some of these extracts were found to be selectively more active against breast cancer cell line than HeLa cells The ATP dependent Cell Titer Glow Luminescent Cell Viability Assay further confirmed the effect of the extracts on cell viability Test of the activity of different caspase enzymes revealed that some of the effective extracts had the capability of inducing apoptosis Western blotting was used to confirm the role of various caspases in the activation of apoptosis Finally isolated compounds from these extracts and their derivatives were screened with the MTT assay for their effect on cell viability One of these isolated compounds has shown promising anti proliferative activity and could induce a specific caspase suggesting activation of caspase dependent apoptosis Thus analyses from these multi pronged approaches have resulted in the identification and characterization of extracts having anticancer potential from five indigenous plant species We are further characterizing their mechanism s of action as well as exploring other cell death pathways that may be induced Overall our results demonstrate that traditional medicinal plants can provide an excellent source of natural raw material to isolate novel anticancer agents enlarging the arsenal of new molecules available to fight cancer

plants: Properties and Application Mohd Sayeed Akhtar,Mallappa Kumara Swamy,2018-06-29 Cancer is one of the leading death cause of human population increasingly seen in recent times Plants have been used for medicinal purposes since immemorial times Though several synthetic medicines are useful in treating cancer they are inefficient and unsafe However plants have proved to be useful in cancer cure Moreover natural compounds from plants and their derivatives are safe and effective in treatment and management of several cancer types The anticancer plants such as Catharanthus roseus Podophyllum peltatum Taxus brevifolia Camptotheca acuminata Andrographis paniculata Crateva nurvala Croton tonkinensis Oplopanax horridus etc are important source of chemotherapeutic compounds These plants have proven their significance in the treatment of cancer and various other infectious diseases Nowadays several well known anticancer compounds such as taxol podophyllotoxins camptothecin vinblastine vincristine homoharringtonine etc have been isolated and purified from these medicinal plants Many of them are used effectively to combat cancer and other related diseases The herbal medicine and their products are the most suitable and safe to be used as an alternative medicine Based on their traditional uses and experimental evidences the anticancer products or compounds are isolated or extracted from the medicinally important plants Many of these anticancer plants have become endangered due to ruthless harvesting in nature Hence there is a need

to conserve these species and to propagate them in large scale using plant tissue culture Alternatively plant cell tissue and organ culture biotechnology can be adopted to produce these anticancer compounds without cultivation The proper knowledge and exploration of these isolated molecules or products could provide an alternative source to reduce cancer risk anti tumorigenic properties and suppression of carcinogen activities Anticancer plants Volume 1 Properties and Application is a very timely effort in this direction Discussing the various types of anticancer plants as a source of curative agent their pharmacological and nutraceutical properties cryo preservations and recent trends to understand the basic cause and consequences involved in the diseases diagnosis We acknowledge the publisher Springer for their continuous inspiration and valuable suggestions to improvise the content of this book We further extend our heartfelt gratitude to all our book contributors for their support and assistance to complete this assignment I am sure that these books will benefit the scientific communities including academics pharmaceuticals nutraceuticals and medical practitioners

Plants that Fight Cancer, Second Edition Spyridon E. Kintzios, Maria G. Barberaki, 2019-06-26 Plants that Fight Cancer Second Edition is a compilation that reviews cancer treatment and research based information on the plant kingdom as the source of both known and novel chemical moieties and mixtures many of them still under identification This new edition follows the organization of the first book with a considerable expansion of content that more than doubles the volume of information Divided into four segments the first part is dedicated to a review of our current knowledge of cancer the different types and incidence the molecular pathways of the disease and the various treatment protocols with an emphasis on chemotherapy The second part is a brief journey in pharmacognosy with detailed information about each of the fourteen different chemical groups of plant secondary metabolites their use in cancer chemotherapy and updated information on the biotechnological production of the most representative compounds in clinical practice The third part of the book comprises six chapters dedicated to either plant chemotherapeutical approaches to specific cancer types e g bladder prostate or specific groups of plant secondary metabolites with novel and promising properties for cancer treatment e g naphthoquinones lectins phenanthridone alkaloids The fourth part containing investigative information on almost 300 individual plant species with established anticancer properties either on a clinical or in vitro level is with no doubt the most analytical This new edition contains chapters on cytotoxic phenanthridone alkaloid constituents of the Amaryllidaceae naphthoquinone contained anticancer terrestrial plants polyphenols and cancer immunology medicinal plant product based fabrication nanoparticles Au and Ag and their anticancer effects bladder and prostate cancer and plant lectins in cancer treatment

FEATURES Provides efficient information for all kinds of cancer and plant chemotherapeutical approaches to specific cancer types Discusses specific groups of plant secondary metabolites with novel and promising properties for cancer treatment Provides scientific information for medicinal uses of various plants Contains analytical information on almost 300 individual plant species with established anticancer properties either on a clinical or in vitro level Focuses on plant genera and species that are either already used in cancer
