Research for Educational Change Jill Adler, Anna Sfard, 2016-06-17 Research for Educational Change presents ways in which educational research can fulfil its commitments to educational practice Focussing its discussion within the context of mathematics education it argues that while research generated insights can have beneficial effects on learning and teaching the question of how these effects are to be generated and sustained is far from evident The question of how to turn research into educational improvement is discussed here in the context of learning and teaching hindered by poverty and social injustice In the first part of the book four teams of researchers use different methodologies while analysing the same corpus of data collected in a South African mathematics classroom In the second part each of these teams makes a specific proposal about what can be done and how so that its research generated insights have a tangible beneficial impact on what is happening in mathematical classrooms Combining two discourses that of researchers speaking to one another and that of researchers communicating their insights to those responsible for educational practice the book deals with the perennial question of communication between those who study educational processes and those who are directly responsible for teacher education educational research and classroom practices This book will be key reading for postgraduates researchers and academics in education and particularly in the areas of mathematics education education research teacher education and classroom practice It will also appeal to teacher educators practitioners and undergraduate students interested in educational research

The Schoolmasters' Yearbook & Educational Directory, 1915 **Mathematisation and Demathematisation**, 2007-01-01 In this volume scholars from diverse strands of research have contributed their perspectives on a process of

mathematisation which renders social economical or political relationships increasingly formal At the same time mathematical skills lose their importance as they become replaced by diverse technological tools a process of demathematisation takes place The computerization of financial transactions calculation of taxes and fees comparison of prices as well as orientation by means of GPS visualisation of complex data and electronic voting systems all these mathematical technologies increasingly penetrate the lifestyle of consumers What are the perils and promises of this development Who is in charge who is affected who is excluded A common concern of all the authors of this volume is an attempt to draw attention to issues related to the formatting power of mathematics and to its role as implicit knowledge which results in a process of demathematisation This process having once received considerable attention is now threatened to be eclipsed by the proliferation of a discussion of school mathematics which shows a tendency of cutting off its own philosophical and political roots Taken together the contributions reveal a rather complex picture They draw attention to the importance of clarifying epistemological societal and ideological issues as a prerequisite for a discussion of curriculum
