Michael C. Burda, Charles Wyplosz, 1997 The Macroeconomics of Developing Countries Giovanni Andrea Cornia, 2020 The book focuses on the short and long term macroeconomic challenges faced by developing countries characterized by missing incomplete and dualistic markets and weak institutions Such problems affect long term growth short term macroeconomic equilibrium employment and inequality far more than in the advanced economies A central message of the book is that ignoring these features and applying to developing countries models inspired by the reality of advanced economies may lead to wrong conclusions and policies These challenges are discussed for a number of archetypes of developing economies dependent on land and natural resources affected by supply rigidities in agriculture and featuring dualistic markets a dominant informal sector fast population growth and chronic dependence on the export of commodities and a volatile external finance Finally the book discusses the impact on growth inequality and poverty of the stabilization and structural adjustment reforms that were increasingly implemented during the last 30 years These issues have acquired center stage after the launch of the Millennium Development Goals and Sustainable Development Goals initiatives that have not spelled out a clear macroeconomic approach There is a risk therefore that wrong policies and sudden shocks may derail the progress towards the SDGs achieved by means of social policies

Michael C. Burda, Charles Wyplosz, 1993 Macroeconomics A European Text can be used for undergraduates in economics as the main textbook for macroeconomics and for MBA students or undergraduates in business studies as a textbook for a first course in economics The concepts and results are established geometrically rather than through mathematics while a formal treatment is presented in

Computational Economics Oscar Afonso, Paulo B. Vasconcelos, 2015-08-27 Computational Economics A concise introduction is a comprehensive textbook designed to help students move from the traditional and comparative static analysis of economic models to a modern and dynamic computational study The ability to equate an economic problem to formulate it

into a mathematical model and to solve it computationally is becoming a crucial and distinctive competence for most economists. This vital textbook is organized around static and dynamic models covering both macro and microeconomic topics, exploring the numerical techniques required to solve those models. A key aim of the book is to enable students to develop the ability to modify the models themselves so that using the MATLAB Octave codes provided on the book and on the website, students can demonstrate a complete understanding of computational methods. This textbook is innovative, easy to read, and highly focused, providing students of economics with the skills needed to understand the essentials of using numerical methods to solve economic problems. It also provides more technical readers with an easy way to cope with economics through modelling and simulation. Later in the book, more elaborate economic models and advanced numerical methods are introduced, which will prove valuable to those in more advanced study. This book is ideal for all students of economics, mathematics, computer science, and engineering taking classes on Computational or Numerical Economics. *Journal of Economic Literature*, 1998

An Economic Analysis of Public Law George Dellis, 2021-03-26. This original and insightful book considers the ways in which public law, which emphasises legality, the Demos, and economics, a science oriented towards the markets, the Agora, intertwine. Throughout, George Dellis argues that the concepts of legality and efficiency should not be perceived separately.
