Scholz-Wäckerle, 2017-01-12 The world is in turmoil the dynamics of political economy seem to have entered a phase where a return to normal cannot be expected Since the financial crisis conventional economic theory has proven itself to be rather helpless and political decision makers have become suspicious about this type of economic consultancy This book offers a different approach It promises to describe political and economic dynamics as interwoven as they are in real life and it adds to that an evolutionary perspective The latter allows for a long run view which makes it possible to discuss the emergence and exit of social institutions The essays in this volume explore the theoretical and methodological aspects of evolutionary political economy In part one the authors consider the foundational contributions of some of the great economists of the past while the second part demonstrates the benefits of adopting the methods of computer simulation and agent based modelling Together the contributions to this volume demonstrate the richness diversity and great explanatory potential of evolutionary political economy This volume is extremely useful for social scientists in the fields of economics politics and sociology who are interested to learn what evolutionary political economy is how it proceeds and what it can provide *Global Financial*

The recent economic trends and the challenges posed by the global crisis reinforce the importance of implementing strategies for development as opposed to leaving the economy to market forces Countries need a strategic compass for long run economic development either explicitly or implicitly Among other ingredients this comprises macroeconomic policies sectoral policies including the financial sector trade and industrial policies institution building in key areas and development friendly global governance Within a chosen medium or even long term strategy governments need more policy space to adjust to the specific and evolving social historical and institutional context The experience of Asia shows that rather than implementing narrow and rigid general guidelines experimental approaches which require policy space are a recipe for success Furthermore the slow growth periods endured by several countries the lost decades allowed inferring which policies should be avoided The authors of this publication share the notion that developing countries can and should learn more from each other as well as from their own past experience It is important to look at comparisons between developing countries including both success and failure stories In this second volume seven country studies contribute to this approach From this perspective poor economic results in developing regions and transition economies in the 1980s and 1990s have to be compared with rapid output growth and social improvements in the two preceding decades as well as the 2000s Several factors have contributed to explaining these contrasts In particular the existence of a developmental State that uses its room for manoeuvre to act on both the supply and demand side is a common denominator of most successful experiences On the contrary neoliberal policies that restrained the role of the State in the economy and dismissed the need to preserve any policy space prevailed in the slow growing regions during the lost decades
