Rollins,1981 Suisun Marsh is located adjacent to Suisun and Grizzly bays in the Sacramento San Joaquin River Estuary near the cities of Fairfield Cordelia and Benicia California The most obvious wildlife resource of the marsh is waterfowl The Marsh represents approximately 12% of all remaining natural marshland in California It is a vital wintering area for ducks of the Pacific Flyway A single aerial survey conducted in October 1974 recorded 1 128 035 waterfowl in the

Marsh or 28% of the waterfowl in the state at that time Approximately 150 duck clubs own and manage 43 610 acres of the 57 310 acres of land area the state and federal government own the remaining 13 700 acres In addition to waterfowl the Marsh supports well over 150 other species of wildlife including some that are rare or endangered Suisun Marsh in its present form as a brackish water marsh is also endangered Increasing upstream water diversions by state and federal water projects municipalities and irrigation districts are reducing the freshwater flows which impede the intrusion of sea water and mix with it to produce an estuarine environment It has been established that such diversions will increase the magnitude and duration of saltwater intrusion into Marsh bays and sloughs Ecological studies conducted in the Marsh by the California Department of Fish and Game DFG and the U S D A Soil Conservation Service SCS have demonstrated that the application of highly saline water on the managed wetlands would result in vegetative changes that reduce the abundance of important waterfowl food plants and thus decrease the waterfowl holding capacity of the Marsh The preservation of the Suisun Marsh as a viable wildlife area capable of supporting its present wide variety of plants and animals particularly waterfowl is largely dependent upon three factors 1 water of adequate quality and quantity for marsh management purposes 2 the widespread use of efficient and effective marsh management practices and 3 the retention of tidal mudflats and marshes In 1977 the California Water Resources Control Board SWRCB adopted Decision 1485 which set stringent water quality standards for the estuary surrounding the Marsh These standards were recommended by local state and federal conservation agencies after nearly fifteen years of intensive research The SWRCB was aware at the time it adopted D 1485 that the water quality standards stipulated therein were adequate for marsh protection only if efficient marsh management practices were employed The SWRCB is responsible for ensuring the efficient and reasonable use of the State s limited water resources To that end the Board judged that the reasonable use of water in the Marsh required that local landowners employ efficient marsh management practices The purpose of this guide is to provide the basic information necessary for the landowners in the Marsh to practice productive marsh management This guide incorporates the results of research projects and the practical know how of experienced marsh managers The primary objective of the management practices described herein is to maximize waterfowl food production while maintaining a diverse marsh flora capable of supporting the present wide variety of animal life
