*How Shanghai Does It* Xiaoyan Liang, Huma Kidwai, Minxuan Zhang, Yinan Zhang, 2016-04-08 The Shanghai basic education system has garnered significant attention since its extraordinary performance in the 2009 and 2012 Programme for International Student Assessment PISA a global assessment of 15 year olds educational abilities Among the 65 participating economies in 2012 Shanghai China ranked first on all three major domains of PISA i.e mathematics reading and science Shanghai also stands out for having the world's highest percentage of resilient students students from socio economically disadvantaged backgrounds who emerge as top performers Shanghai's PISA story has generated intense discussions and diverse speculations in field of international educational development and numerous studies have been done in the attempt to unravel the mystery Missing from the picture however is a more comprehensive systematic in depth and objective rendition of the policies and practices of Shanghai basic education benchmarked against others in key dimensions This report presents an in depth examination of how Shanghai scored highest in the areas of reading science and mathematics on PISA It documents and benchmarks key policies in basic Shanghai education provides evidence on the extent to which these policies have been implemented in schools and explores how these policies have affected learning outcomes The report uses PISA 2012 data to analyze Shanghai student achievement variation and to examine the extent school variables may be associated with the variation beyond family and student background It also uses the World Bank's Systems Approach for Better Education Results SABER an existing systems diagnostic and benchmarking tool as an organizing framework and for data collection School based surveys and other existing research shed further light on educational impact and implementation While the report attempts to adopt a systems approach particular emphasis is placed on teachers education financing balancing autonomy and accountability and student assessment

**The Art of Uncertainty** David Spiegelhalter, 2025-03-04 Named a Best Book of the Year by Forbes and The Economist From our greatest living statistical communicator Tim Harford comes an invaluable data driven guide for understanding and learning to embrace risk and uncertainty in our daily lives How dangerous is our diet How much of sports falls into the realm of luck When authorities categorize a given event as highly likely how likely is that really Whether we're trying to decide if the benefits of a new medication are worth the chance of side effects or if artificial intelligence truly threatens humanity our lives are riddled with uncertainties both everyday and existential yet it can be difficult to know how to properly weigh all those unknowns Luckily for us renowned statistician David Spiegelhalter has spent his career dissecting data to resolve the apparently random and decode the many decisions we face with imperfect information In *The Art of Uncertainty* he shows how we can become better at dealing with what we don't know to make smarter choices in a world so full of puzzling variables In lucid lively prose Spiegelhalter guides us through the principles of probability illustrating how they can help us think more analytically about everything from medical advice to sports to climate change forecasts He demonstrates how taking a mathematical approach

to phenomena we might otherwise attribute to fate or luck can help us sort hidden patterns from mere coincidences better evaluate cause and effect and predict what is likely to happen in the future Along the way we learn how a misinterpretation of a probability contributed to the infamous Bay of Pigs fiasco why a ship twice the size of the Titanic sank without a trace and why we can be so confident that no two properly shuffled decks of cards have ever been in the same order Sparkling with wit and fascinating real world examples this is an essential guide to navigating uncertainty while also retaining the humility to admit what we don't or simply cannot know October 2019 Monthly Current Affairs with MCQs for Competitive Exams Disha Experts,2019-09-25

**Follow the Science to School: Evidence-based Practices for Elementary Education** Barbara Davidson,Kathleen Carroll,Michael J. Petrilli,2022-03-21 Follow the science How often have you picked up an education book to read how according to the authors the system is broken failing and flailing but their ideas for fixing it will bring about a miraculous transformation That is not the approach of this volume Sure the editors believe that our system of education could achieve significantly better results But they also recognize that schools have gotten better over time One explanation is the progress schools have made in following the science Especially in early reading and math instruction scholars know more now about what works than we did in the past and more schools are putting that knowledge into practice Now in the wake of a horrific pandemic even the best elementary schools are struggling to help their students get their momentum back again In this book the editors share high quality syntheses of evidence and insights from leading educators academics and other experts And they communicate those findings in user friendly language with an understanding of the real world complexities of schools and classrooms

**Transnational Higher Education in Computing Courses** Jenny Carter,Clive Rosen,2019-09-24 There has been exponential growth in transnational education TNE in the last few years as UK universities have looked to expand their markets Recipient countries have sought short cuts to developing their higher education provision which has proved a lucrative income stream for some universities But overseas collaborations are not without risk Recipient countries can be concerned with external influence over curricula quality being diluted and higher education being infected by neo imperialism These concerns are not without foundation There are risks for providers too Reputations can be damaged if academic standards are compromised Conflicts of interest can occur between quality of provision and the pot of gold on offer Staff can view overseas collaborations as distracting from

their research and commitment to home students Computing is a particularly popular subject for TNE but critical thinking analysis independent learning and creativity can be compromised Preventing plagiarism is difficult Constant changes in technology result in constant curricula revision which causes severe problems for overseas collaborations This book focuses on TNE in the computing domain However cross cultural issues challenge TNE management and administration whatever the subject area If the ever present tensions are not continuously monitored they can quickly threaten the sustainability of the collaboration This book identifies many of the threats and some of the solutions The readership for this book is truly global Any international development officer in higher education considering an overseas collaboration will benefit from this book Any academic becoming engaged in or already involved with a TNE partnership either as provider or recipient will gain information and insight into the practice and issues Researchers in TNE will discover more lines of enquiry Students considering a course with an overseas provider or in coming to the UK to study will be better prepared thereby enabling a more fulfilling and rewarding experience Anyone who has an interest in TNE whether at the senior executive level operational level delivering programmes or as a recipient of TNE should read this book The wealth of experience gathered here will provoke questions prompt debate and offer solutions It has been written by people who know the issues bear the scars and are happy to share their knowledge It will greatly benefit future transnational collaborations
