48-Volt Developments Kevin Jost, 2015-11-09 Development of higher voltage electrical systems in vehicles has been slowly progressing over the past few decades However tightening vehicle efficiency and emissions regulations and increasing demand for onboard electrical power means that higher voltages in the form of supplemental 48 V subsystems may soon be nearing production as the most cost effective way to meet regulations The displacement of high wattage loads to more efficient 48 V networks is expected to be the next step in the development of a new generation of mild hybrid vehicles In addition to improved fuel economy and reduced emissions 48 V systems could potentially save costs on new electrical features and help better address the emerging needs of future drivers Challenges to 48 V system implementation remain leading to discussions by experts from leading car makers and suppliers on the need for an international 48 V standard Initial steps toward a proposed standard have already been taken So the consensus of global forecasts suggests that 48 V mild hybrids will soon come to dominate the market Compared with 200 600 V full hybrid and battery electric vehicles the lower voltage approach avoids the need for high cost safety features and large battery packs
