Thermodynamic Mechanism of MQL Grinding with Nano Bio-lubricant Changhe Li, 2023-10-30. This book discusses the thermodynamic mechanism of MQL grinding with nano biological lubricant from the force, heat, surface integrity and micro morphology. It makes up the fatal defect of the lack of heat transfer capability of traditional MQL grinding. The machining accuracy, surface quality, especially surface integrity of the workpiece are significantly improved at the same time the service life of the grinding wheel is increased and the working environment is improved. The general scope of the book's content is the effects of MQL grinding with nano bio lubricant on grinding force, thermal mechanism and surface. It provides a new method of sustainable green grinding for environment friendly resource saving and energy efficient utilization and solves the technical bottleneck of the insufficient capacity in MQL heat transfer.

Introduction to Manufacturing Processes John A. Schey, 1987. This revision aims to address changes that have taken effect since the publication of the second edition. The most significant change has been in the attitude of industry to concurrent engineering. In 1987, mostly lip service was paid to it; today it has become general practice in most competitive corporations. In the second edition, the author discussed this as the manufacturing system. In the third edition, it becomes the focal point. Concurrent engineering involves the whole product realization process including product concept, performance criteria, mechanical design and analysis, materials selection, process planning and modeling, production control, automation, assembly management and others. An introductory text cannot possibly cover all of these topics; hence the emphasis of the third edition remains on the physical principles and the application of these principles to processes. The major difference relative to the second edition will be the emphasis on interactions between process and design. Capabilities and limitations of processes will be highlighted to show what they mean in terms of design possibilities and design modifications will be suggested for ease of manufacture. Impact on the environment and possibilities for recycling will be woven into the entire text.
