Rangara-Omol, 2017-05-19 This trainer's guide was borne out of indicative results of needs assessments of medical trainers who are subject specialists but have minimal skills in executing curricula into classroom teaching and learning. The learning material in this guide is designed and developed using principles of problem-based learning. It offers practical suggestions on lesson planning, classroom and laboratory activities and presentation templates applicable to competency training. The development of numerous professional and positive life skills can be attributed to problem-based learning. These skills include communication, professional values and ethics, teamwork, reflective practice, self-regulation, self-responsibility, self-drive, independent and life-long learning. This guide has been designed to incorporate teaching and learning methods that develop these skills. Fluid and Electrolytes Mary Baumberger-Henry, 2005 This book provides a foundation of knowledge

pertaining to this important topic. Students, registered nurses and allied health personnel will benefit from the user-friendly format in which the basic concepts are presented. Author Mary Baumberger Henry DNSc RN utilizes a physiological approach to teach the terminology involving fluids and electrolytes as well as the need for acid-base balance in the body. Disturbances of these properties, how the imbalance may affect the various systems of the body and consequent disease states are additional areas that are covered. This valuable resource also takes a comprehensive look at the cell membrane and the distribution of solutes in and out of the cell. Fluid and Electrolytes facilitates learning of this important yet complex topic in nursing. The inclusion of examination questions and in-depth nursing implications makes this resource perfect for professionals looking to develop an understanding of fluids and electrolytes.
