Living Roofs in Integrated Urban Water Systems Daniel Roehr, Elizabeth Fassman-Beck, 2015-03-05 With the infrastructure to manage storm water threats in cities becoming increasingly expensive to build or repair the design community needs to look at alternative approaches Living roofs present an opportunity to compliment ground level storm water control measures contributing to a holistic integrated urban water management system This book offers tools to plan and design living roofs in the context of effectively mitigating storm water Quantitative tools for engineering calculations and qualitative discussion of potential influences and interactions of the design team and assembly elements are addressed A Living History of Immunology Kendall Arthur Smith, 2015-11-04 In the highly competitive world of biomedical science often the rush to publish and to be recognized as first with a new discovery concept or method is lost in the hurly burly of the moment as the maddening crowd moves on to the next new thing One of the great things about immunology today is that it has only become mature as a science within the last half century and especially within the past 35 years as a consequence of the revolution of molecular immunology which has taken place only since 1980 Consequently most of those who have contributed to our new understanding of how the immune system functions are still alive and well and still contributing Thus A Living History of Immunology collates many stories from the investigators who actually performed the experiments that have established the frontiers of immunology Accordingly this volume combats revisionist science by those who want to alter history by telling the stories a different way than actually happened In this regard one of the good things about science vs other disciplines is that we have the written record of what was done when it was done and by whom Even so we do not have the complete story or narrative of how and why experiments were done and what made the differences that led to success This volume captures and chronicles some of these stories from the past fifty years in immunology *Physiological and Pathological Responses to Hypoxia and High Altitude* Rodrigo Iturriaga, Rodrigo Del Rio, Jean-Paul R-Richalet, 2020-06-22 The appearance of photosynthetic organisms about 3 billion years ago increased the partial pressure of oxygen PO₂ in the atmosphere and enabled the evolution of organisms that use glucose and oxygen to produce ATP by oxidative phosphorylation Hypoxia is commonly defined as the reduced availability of oxygen in the tissues produced by different causes which include reduction of atmospheric PO₂ as in high altitude and secondary to pathological conditions such as sleep breathing and pulmonary disorders anemia and cardiovascular alterations leading to inadequate transport delivery and exchange of oxygen between capillaries and cells Nowadays it has been shown that hypoxia plays an important role in the genesis of several human pathologies including cardiovascular renal myocardial and cerebral diseases in fetal young and adult life Several mechanisms have evolved to maintain oxygen homeostasis Certainly all cells respond and adapt to hypoxia but only a few of them can detect hypoxia and initiate a cascade of signals intended to produce a functional systemic response In mammals oxygen detection mechanisms have been extensively studied in erythropoietin producing cells chromaffin cells bulbar and cortical neurons pulmonary neuroepithelial cells smooth muscle cells of pulmonary arteries and

chemoreceptor cells While the precise mechanism underpinning oxygen sensing is not completely known several molecular entities have been proposed as possible oxygen sensors i e Hem proteins ion channels NADPH oxidase mitochondrial cytochrome oxidase Remarkably cellular adaptation to hypoxia is mediated by the master oxygen sensitive transcription factor hypoxia inducible factor 1 which can induce up regulation of different genes to cope the cellular effects related to a decrease in oxygen levels Short term responses to hypoxia included mainly chemoreceptor mediated reflex ventilatory and hemodynamic adaptations to manage the low oxygen concentration while more prolonged exposures to hypoxia can elicit more sustained physiological responses including switch from aerobic to anaerobic metabolism vascularization and enhancement of blood O₂ carrying capacity The focus of this research topic is to provide an up to date vision on the current knowledge on oxygen sensing mechanism physiological responses to acute or chronic hypoxia and cellular tissue organ adaptations to hypoxic environment One Health: The Well-being Impacts of Human-nature Relationships Eric
